Setup for 2706-P22R-SC

Please follow these instructions to setup the P22R display.

1 Connect the display to the communications module using supplied cable.

2 With a CAT5 cable, connect the comms module to an unmanaged switch.

3 Connect 24 VDC to comms module.

4 Connect the unmanaged switch to both your PC and PLC with a CAT5 cable.

IMPORTANT – PC & PLC must be in the 192.168.1.x subnet!

Setup for 2706-P4x-SC

Please follow these instructions to setup the P4x display.

1 Connect the display to the communications module using supplied cable.

2 Wire the comms module as shown in the above wiring diagram.

3 With a CAT5 cable, connect the comms module to an unmanaged switch.

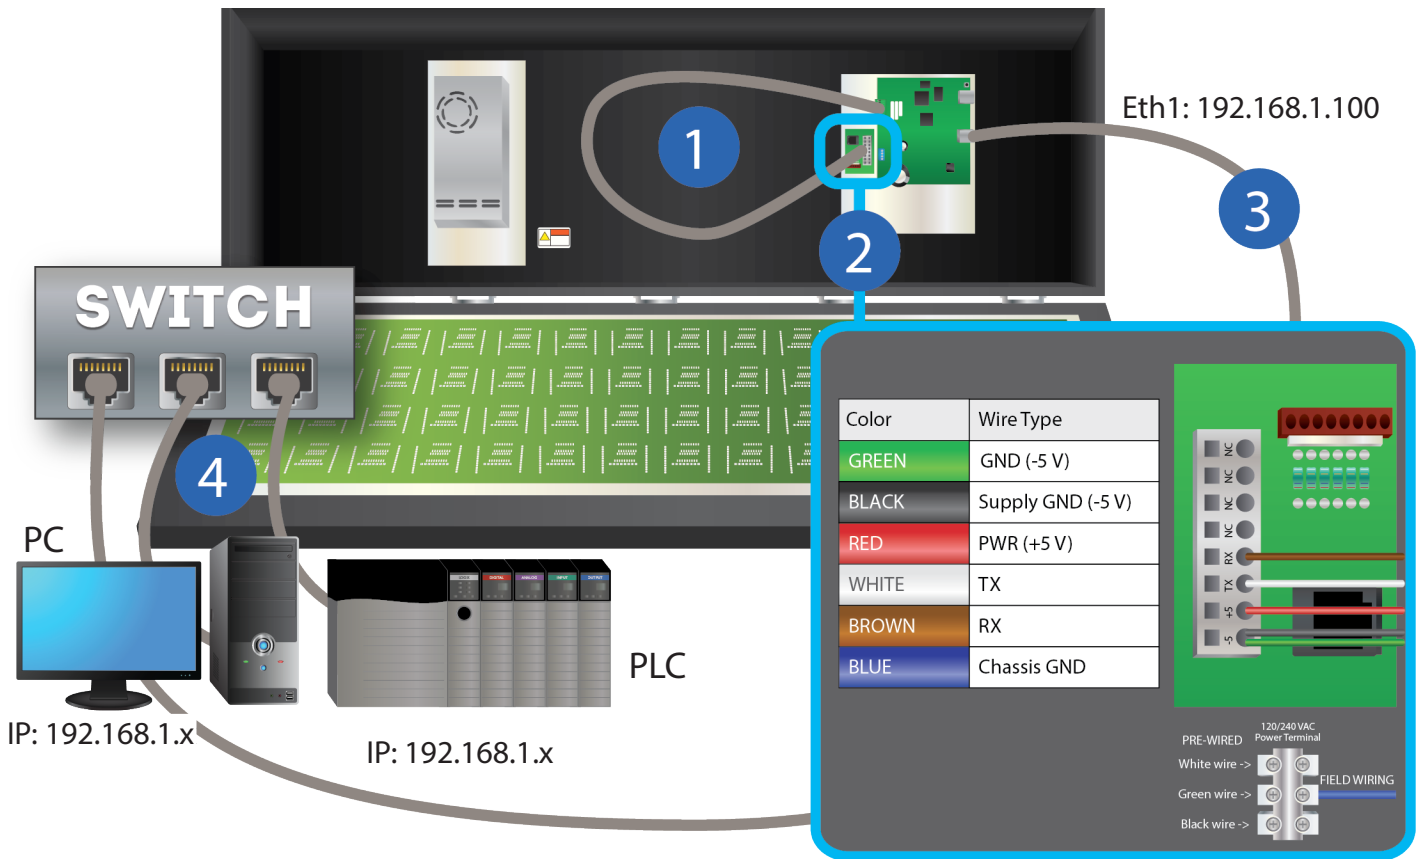

4 Connect the unmanaged switch to both your PC and PLC with a CAT5 cable.

IMPORTANT – PC & PLC must be in the 192.168.1.x subnet!

Setup for 2706-P7x-SC

Please follow these instructions to setup the P7x display.

2706-PENETK2-SC

1 Connect the display to the communications module using supplied cable.

2 Wire the comms module as shown in the above wiring diagram.

3 With a CAT5 cable, connect the comms module to an unmanaged switch.

4 Connect the unmanaged switch to both your PC and PLC with a CAT5 cable.

IMPORTANT – PC & PLC must be in the 192.168.1.x subnet!

Setup for 2706-P9x-SC

Please follow these instructions to setup the P9x display.

2706-PENETK2-SC

Eth1: 192.168.1.100

1 Connect the display to the communications module using supplied cable.

2 Wire the comms module as shown in the above wiring diagram.

3 With a CAT5 cable, connect the comms module to an unmanaged switch.

4 Connect the unmanaged switch to both your PC and PLC with a CAT5 cable.

IMPORTANT – PC & PLC must be in the 192.168.1.x subnet!

Setup for 2706-P9xC2-SC

Please follow these instructions to setup the P22R display.

1 Wire the comms module to the display as shown in the above wiring diagram.

2 Connect power as shown in the above wiring diagram.

3 With CAT5 cable, connect the comms module to an unmanaged switch.

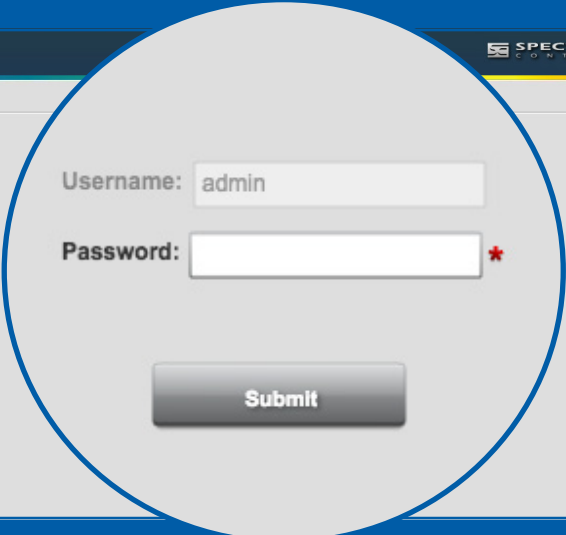

4 Connect the unmanaged switch to both your PC and PLC with CAT5 cable.

IMPORTANT – PC & PLC must be in the 192.168.1.x subnet!

Configuration for Comms Module

Please follow these 3 steps to setup the InView communications module.

Step 1 - Login

Username: admin
Password: *

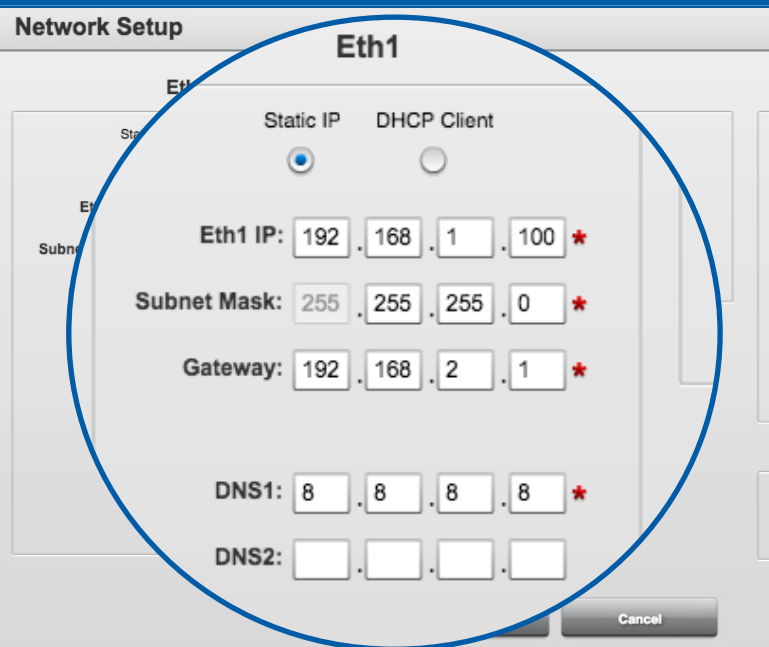

Submit

Open your browser and navigate to "192.168.1.100"

Username: admin
Password: spectrum

Note: You will need to change your PC IP so it's in the same subnet

Step 2 - Network Setup

Network Setup

Eth1

Static IP DHCP Client

Eth1 IP: 192 . 168 . 1 . 100 *

Subnet Mask: 255 . 255 . 255 . 0 *

Gateway: 192 . 168 . 2 . 1 *

DNS1: 8 . 8 . 8 . 8 *

DNS2:

Cancel

Open Network Setup

Make sure the Eth1 IP setting matches your PLC network

Eth1 and Eth2 cannot be in the same subnet.

Note: The PC and the PLC must be in the same subnet as the InView Eth1 interface.

Note: Only use Eth1, leave Eth2 set to "DHCP"

Step 3 - PLC Setup

(For TCP/IP Passthrough, see below.)

The screenshot shows the 'PLC' configuration window. On the left, under 'PLC', the 'Msg Server Type' is set to 'ControlLogix'. Below it, 'Device Name' is 'inview_message_server', 'Connection' is 'Ethernet', 'Protocol' is 'EtherNet/IP', 'Address' is '10.0.0.223', 'TCP Port' is '44818', 'Slot Number' is '0', and 'Enable Polling' is checked with a 'Delay' of '100 ms'. A 'Test Device Connection' button is at the bottom. On the right, under 'Tag Setup', the 'Classic' radio button is selected. The 'Message Trigger' section has 'Tag Name' 'inview_mesg_trigger', 'Data Type' 'SINT', and 'Base Addr / Offset' '0'. The 'Message Data' section has 'Tag Name' 'inview_mesg_data', 'Data Type' 'SINT', 'Base Addr / Offset' '1', and 'Array Size' '16 Bytes'.

Open PLC

Select your PLC and enter its IP address.

Enter your PLC server tag values.

Check the enable polling box.

Note: Both message and variable tags must exist on the PLC controller.

TCP/IP Passthrough

The screenshot shows the 'PLC' configuration window. The 'Msg Server Type' is set to 'Passthrough'. Below it, 'Connection' is 'Ethernet', 'Protocol' is 'TCP/IP', and 'TCP Port' is '3001'.

Open PLC

For TCP/IP passthrough, select "Passthrough" for the Msg Server Type.

Set the TCP Port

For more information, please access the InView context-sensitive online help by clicking on the blue button in the upper right corner of the user interface.
