Rapid Installation

PSEN cs1.1n

PILZ
THE SPIRIT OF SAFETY

▸ PSEN sensor technology

Introduction

Validity of documentation

This documentation is valid for the product PSEN cs1.1n. It is valid until new documentation is published.

This operating manual explains the function and operation, describes the installation and provides guidelines on how to connect the product.

Using the documentation

This document is intended for instruction. Only install and commission the product if you have read and understood this document. The document should be retained for future reference.

Definition of symbols

Information that is particularly important is identified as follows:

> **DANGER!**
>
> This warning must be heeded! It warns of a hazardous situation that poses an immediate threat of serious injury and death and indicates preventive measures that can be taken.

> **WARNING!**
>
> This warning must be heeded! It warns of a hazardous situation that could lead to serious injury and death and indicates preventive measures that can be taken.

> **CAUTION!**
>
> This refers to a hazard that can lead to a less serious or minor injury plus material damage, and also provides information on preventive measures that can be taken.

> **NOTICE**
>
> This describes a situation in which the product or devices could be damaged and also provides information on preventive measures that can be taken. It also highlights areas within the text that are of particular importance.

> **INFORMATION**
>
> This gives advice on applications and provides information on special features.

Safety

Intended use

Safety function of safety switch:

- 2 safety outputs, each of which supply a high signal when the actuator is in the safety switch's response range.

The safety switch meets the requirements in accordance with:

- EN 60947-5-3 with the actuator PSEN cs1.1 : PDDB
- EN 62061: SIL CL 3
- EN ISO 13849-1: PL e (Cat. 4)
- EN ISO 14119: Coding level Low, Type4

The safety switch may only be used with the corresponding actuator PSEN cs1.1.

The safety level PL e (Cat. 4)/SIL CL 3 is only achieved if

- the safety outputs use 2-channel processing.

The following is deemed improper use in particular:

- Any component, technical or electrical modification to the product
- Use of the product outside the areas described in this manual
- Use of the product outside the technical details (see Technical details [📖 16]).

> **NOTICE**
>
> **EMC-compliant electrical installation**
>
> The product is designed for use in an industrial environment. The product may cause interference if installed in other environments. If installed in other environments, measures should be taken to comply with the applicable standards and directives for the respective installation site with regard to interference.

Safety regulations

Safety assessment

Before using a unit it is necessary to perform a safety assessment in accordance with the Machinery Directive.

Functional safety is guaranteed for the product as a single component. However, this does not guarantee the functional safety of the overall plant/machine. In order to achieve the required safety level for the overall plant/machine, define the safety requirements for the plant/machine and then define how these must be implemented from a technical and organisational standpoint.

Use of qualified personnel

The products may only be assembled, installed, programmed, commissioned, operated, maintained and decommissioned by competent persons.

A competent person is a qualified and knowledgeable person who, because of their training, experience and current professional activity, has the specialist knowledge required. To be able to inspect, assess and operate devices, systems and machines, the person has to be informed of the state of the art and the applicable national, European and international laws, directives and standards.

It is the company's responsibility only to employ personnel who

▸ Are familiar with the basic regulations concerning health and safety / accident prevention,

▸ Have read and understood the information provided in this description under "Safety"

▸ Have a good knowledge of the generic and specialist standards applicable to the specific application.

Warranty and liability

All claims to warranty and liability will be rendered invalid if

▸ The product was used contrary to the purpose for which it is intended

▸ Damage can be attributed to not having followed the guidelines in the manual

▸ Operating personnel are not suitably qualified

▸ Any type of modification has been made (e.g. exchanging components on the PCB boards, soldering work etc.).

Disposal

▸ In safety-related applications, please comply with the mission time T_M in the safety-related characteristic data.

▸ When decommissioning, please comply with local regulations regarding the disposal of electronic devices (e.g. Electrical and Electronic Equipment Act).

For your safety

> ⚠️ **WARNING!**
>
> Loss of safety function due to manipulation of the interlocking device
>
> Manipulation of the interlocking device may lead to serious injury and death.
>
> – You should prevent any possibility of the interlocking device being manipulated through the use of a spare actuator.
>
> – Keep the substitute actuator in a safe place and protect it from unauthorised access.
>
> – If spare actuators are used, these must be installed as described in Installation [📖 12].
>
> – If the original actuators are replaced with substitute actuators, the original actuators must be destroyed before disposal.

▶ Do not remove the connector's protective cap until you are just about to connect the unit. This will prevent potential contamination.

Unit features

▶ Transponder technology for presence detection

▶ Pilz coding type: Coded

▶ Dual-channel operation

▶ 2 safety outputs

▶ LED display for:

  – State of the actuator

  – Supply voltage/fault

▶ 4 directions of actuation

Function description

The safety outputs may have a high or low signal, depending on the position of the actuator.

In a safe condition there is a low signal at the safety outputs.

State of the outputs:

Actuator in the response range	Safety output 12	Safety output 22
Yes	High	High
No	Low	Low

Block diagram
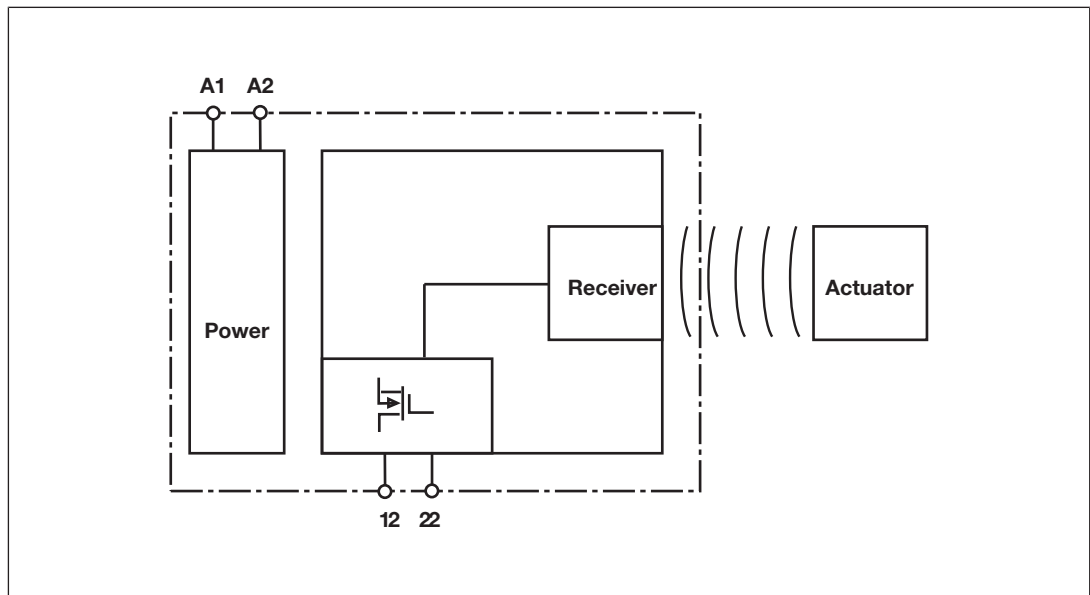

Operating distances
Legend:

▶ S_{ao} Assured operating distance: 15 mm

▶ S_{o} Typical operating distance: 21 mm

▶ S_{r} Typical release distance: 32 mm

▶ S_{ar} Assured release distance: 40 mm

Lateral and vertical offset

Lateral offset	Vertical offset
Legend

[1] Hysteresis

[2] Typical operating distance S_O

[3] Typical release distance S_r

[4] Offset in mm

[5] Operating distance in mm

[6] Response range

Wiring

Please note:

▸ Information given in the "Technical details" must be followed.

▸ The power supply must meet the regulations for extra low voltages with protective separation (SELV, PELV).

▸ The inputs and outputs of the safety switch must have a protective separation to voltages over 60 VDC.

> **INFORMATION**
>
> Only use safety relays with a 24 VDC supply voltage. Safety relays with a wide-range power supply or in AC device versions have internal potential isolation and are not suitable as evaluation devices.

▶ The supply voltage to the safety switch must be protected with a 2 A to 4 A quick-acting fuse.

▶ Ensure the wiring and EMC requirements of IEC 60204-1 are met.

Pin assignment, connector and cable

	5-pin M12 male connector
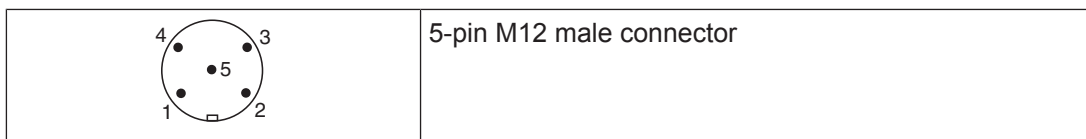

PIN	Pin designation	Function	Wire colour
1	A1	+24 UB	Brown
2	12	Output, channel1	White
3	A2	0 V UB	Blue
4	22	Output, channel2	Black
5	-	Do not connect	Grey

The wire colour also applies for the cable available from Pilz as an accessory.

Connection to evaluation devices

Make sure that the selected evaluation device has the following property:

▶ OSSD signals are evaluated through 2 channels with feasibility monitoring

Please note:

▶ Information given in the Technical details [📖 16] must be followed.

Connection diagram, single connection
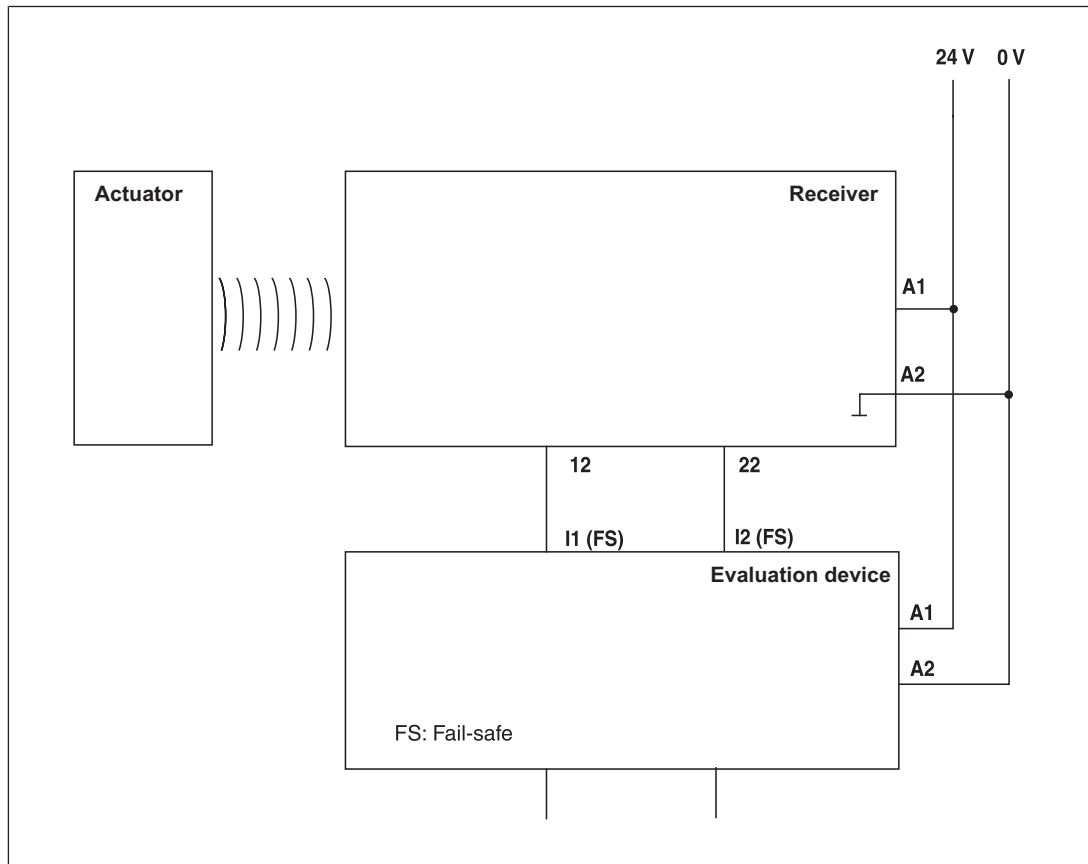

Suitable Pilz evaluation devices are, for example:

▸ PNOZelog for safety gate monitoring

▸ PNOZpower for safety gate monitoring

▸ PNOZsigma for safety gate monitoring

▸ PNOZ X for safety gate monitoring

▸ PNOZmulti for safety gate monitoring
   Configure the switch in the PNOZmulti Configurator with switch type 3.

▸ PSS for safety gate monitoring with standard function block SB064, SB066 or
   FS_Safety Gate

▸ PSSuniversal PLC for safety gate monitoring with function block FS_SafetyGate

The correct connection to the respective evaluation device is described in the operating manual for the evaluation device. Make sure that the connection is made in accordance with the specifications in the operating manual for the selected evaluation device.

The connections to two evaluation devices are shown on the following pages, by way of example:

▸ PNOZ s3 and

▸ PNOZmulti

PNOZ s3
PNOZmulti
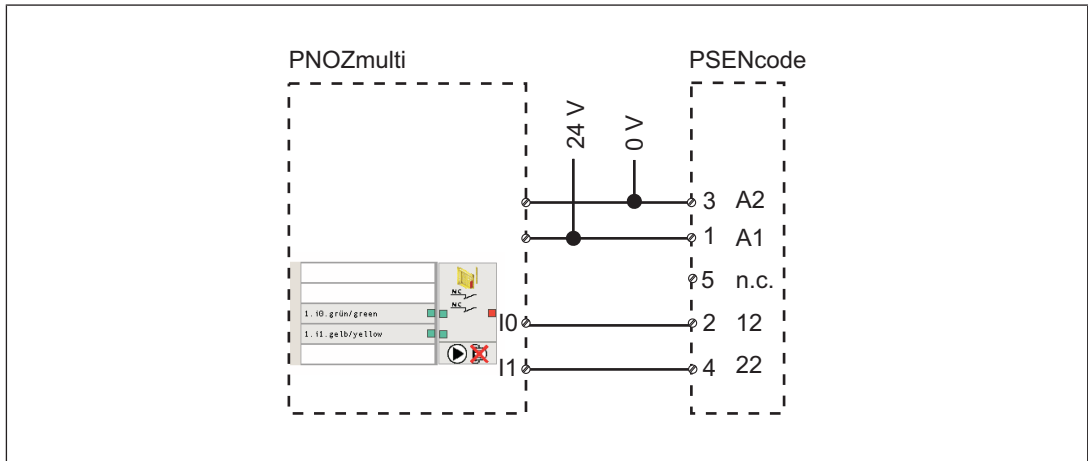

Legend:

I0	Input OSSD
I1	Input OSSD

Teaching in the actuator

Any Pilz actuator PSEN cs1.1) is detected as soon as it is brought into the response range.

Installation

> ⚠️ **CAUTION!**
>
> The unit's properties may be affected if installed in an environment containing electrically or magnetically conductive material. Please check the operating distances and the assured release distance.

▸ The safety switch and actuator should be installed opposite each other in parallel.

– Make sure that the actuator is aligned to the marking on the sensor that guarantees the operating distance required by the plant design (see Operating distances [📖 8]).

▸ Safety switches and actuators should be permanently secured using M5 safety screws with a flat head (e.g. M5 cheese-head or pan head screws).

▸ Protect the actuator from contamination.

▸ Torque setting: Please note the information provided under Technical details [📖 16].

▸ The distance between two safety switches must be maintained (see Technical details [📖 16]).

▸ Make sure that the safety switch and actuator cannot be used as an end stop.

▸ Please note the installation measures in accordance with EN ISO 14119 for a safety switch design 4 and with level of coding Low

▸ For simpler installation, the mounting brackets (see Order reference for Accessories [📖 20]) can be used.

▸ If using angled connector plugs, note the defined angle of the cable routing.

⚠ **CAUTION!**

Possible loss of the safety function by changing the release distance S_{ar} with non-flush installation

Installing the safety switch non-flush within electrically or magnetically conductive material, the value for the assured release distance $\mathbf{S}_{ar}$ can change.

– Check the assured release distance $\mathbf{S}_{ar.}$

Procedure:

Fig.: Sensing faces on the sensor

1. Drill holes (for M5 screws) in the mounting surface to secure the actuator and sensor (see Dimensions in mm [📖 16]).

2. Use a screw to fix the sensor to the mounting surface.

Make sure that the sensor marking that is be used for operation can be operated using the actuator from the right side.

3. Do not fully tighten the second screw on the safety switch.

4. Use a screw to fix the actuator to the mounting surface.

    Make sure that the actuator with the printed side points towards the marking on the sensor.

5. Do not fully tighten the second screw on the actuator.

6. Align the safety switch and tighten the screws.

7. Align the actuator and tighten the screws.

Adjustment

▸ The stated operating distances (see Technical details [📖 16]) only apply when the safety switch and actuator are installed facing each other in parallel. Operating distances may deviate if other arrangements are used.

▸ Note the maximum permitted lateral and vertical offset (see Operating distances [📖 8] and Lateral and vertical offset [📖 9]).

Operation

> **!** **NOTICE**
>
> The safety function should be checked after initial commissioning and each time the plant/machine is changed. The safety functions may only be checked by qualified personnel.

Check the function of the safety switch before commissioning.

Status indicators:

▸ "POWER/Fault" LED lights up green: The unit is ready for operation

▸ "Safety Gate" LED lights up yellow: Actuator is within the response range

▸ "Input" LED lights up yellow: Device is error-free

Fault indicator:

▸ "POWER/Fault" LED lights up red: Error message.
  Flashing codes for fault diagnostics are output to the "Safety Gate" and "Input" LEDs (see Error display through flashing codes).
  Remedy: Rectify fault and interrupt power supply.

Error display through flashing codes

The "Safety Gate" and "Input" LEDs send flash signals; an error code can be established from the number and sequence. The "Power/Fault" LED illuminates red.

Each error code is indicated by three short flashes of the "Input" or "Safety Gate" LED. After a longer pause, the LED will then flash at one second intervals. The number of LED flashes corresponds to a digit in the error code. The error code can consist of up to 3 digits. The digits are separated by a longer period without flashing. The entire sequence is constantly repeated.

Number of flashes	1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16
Decimal error code	1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 0

Example:

Error code 1,4,1:

Flash frequency of the "Safety Gate" or "Input" LED
Meaning of flash frequency:

	Flash frequency	Meaning
I	3 times, short	Code for error message
II	Once, for one second each	Code for 1st digit
III	4 times, for one second each	Code for 2nd digit
IV	Once, for one second each	Code for 3rd digit
V	3 times, short	Code for error message repeated

Table of error codes

Error code Decimal	Number of flashes	Description	Remedy
1.4.1	3x short – 1x long – 4x long – 1x long – 3x short	Wiring error	Rectify wiring error
1.12	3x short – 1x long – 12x long – 3x short	Wiring error	Rectify wiring error
1.13	3x short – 1x long – 12x long – 3x short	Wiring error	Rectify wiring error
14	3x short – 14x long – 3x short	Wiring error	Rectify wiring error
15	3x short – 15x long – 3x short	Wiring error	Rectify wiring error

Other flashing codes signal an internal error. Remedy: Change device.

Safety characteristic data

> **NOTICE**
>
> You must comply with the safety-related characteristic data in order to achieve the required safety level for your plant/machine.

Operating Mode	EN ISO 13849-1: 2015	EN ISO 13849-1: 2015	EN 62061 SIL CL	EN 62061 PFH_D [1/h]	IEC 61511 SIL	IEC 61511 PFD	EN ISO 13849-1: 2015
	PL	Category					T_M [year]
2-ch. OSSD	PL e	Cat. 4	SIL CL 3	4,10E-09	–	1,10E-04	20

All the units used within a safety function must be considered when calculating the safety characteristic data.

> **INFORMATION**
>
> A safety function's SIL/PL values are **not** identical to the SIL/PL values of the units that are used and may be different. We recommend that you use the PAScal software tool to calculate the safety function's SIL/PL values.

Supplementary data

Radio approval

> *USA/Canada*
>
> **FCC ID: VT8-PSENCS1**
> **IC: 7482A-PSENCS1**
>
> FCC/IC-Requirements:
> This product complies with Part 15 of the FCC Rules and with Industry Canada licence-exempt RSS standards.
> Operation is subject to the following two conditions:
> 1) this product may not cause harmful interference, and
> 2) this product must accept any interference received, including interference that may cause undesired operation.
>
> Changes or modifications made to this product not expressly approved by Pilz may void the FCC authorization to operate this equipment.
>
> NOTE: This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.
>
> Le présent produit est conforme aux CNR d'Industrie Canada applicables aux appareils radio exempts de licence. L'exploitation est autorisée aux deux conditions suivantes:
> (1) le produit ne doit pas produire de brouillage, et
> (2) l'utilisateur de le produit doit accepter tout brouillage radioélectrique subi, même si le brouillage est susceptible d'en compromettre le fonctionnement.
