RiDiag – SK 3159.100

created: 24.01.2019 build on www.rittal.com/uk-en

Product description

Description: Software for the parameterisation, diagnosis and analysis of Rittal cooling units.

Functions: For the diagnosis, maintenance and long-term data capture of TopTherm cooling units with Comfort controller. RiDiag II logs equipment data and prepares an error list. RiDiag II also allows you to display and set the device's operating parameters. Logged measurement data can be tracked in real time in the form of a diagram.

Product features

Design: RiDiag II
