Summary of Changes

This publication contains new and updated information as indicated in the following table.

Topic	Page
Changed Safe-Off, Safe Off, and Safe Off Option to Safe Torque Off.	All
Removed Remote I/O.	All
Added publication PFLEX-UM003 and 20COMM-UMxxx to the Additional Resources table.	3
Added Connected Components Workbench to the Product Overview.	3
Added Internal Communications to Space Saving Hardware Features.	4
Added Volts/Hertz to Outstanding Control and Performance	5
Added dual-port EtherNet/IP to section Unsurpassed Capability in Network Communications.	6
Updated the Catalog Number Explanation to current formats. Updated footnotes for c5. Removed footnote 2 for k.	7
Corrected Cat. Code in the Control Options table.	8
Added 600V AC to section Internal EMC Filter.	8
Added footnote to section Feedback Options.	8
Added footnote 1 to section Other Options.	12
Added footnote to Reflected Wave Reduction Modules that 1321 replaces 1204.	12
Added 20-COMM-ER dual-port EtherNet/IP Communication Adapter to section Communication Option Kits.	12
Removed 20-COMM-R from section Communication Option Kits.	12
Removed 1321-3TW005-AA from section Isolation Transformers.	13
Update 20AE1P7 heavy-duty HP values in 600V, 60 Hz, Three-phase, 5% Impedance.	18
Updated sections Unshielded and Shielded/Armored Cable to be compatible with the Installation Instructions.	26
Replaced 208/240 Volt AC Three-phase Input Drive Ratings and Input Protection Devices with the information from the Installation Instructions.	26
Updated section Single-phase Input Power, to show it is rated under UL508C.	27
Added footnote to 600 Volt AC Single-phase Input Drive Ratings and Input Protection Devices .	29
Added footnote to Frame Dimensions, mm (in.) for IP54 Frame E.	32
Removed P6 from list P1...P3 or P6 in Enclosure Dimensions .	39
Updated section Standard Drive Certifications and Specifications. Change information for: c-UL-us, CE, and Functional Safety. Also added footnote to link to Certifications website.	40
Added footnote to Watts Loss (rated load, speed, and PWM).	42

Additional Resources

These documents contain additional information concerning related products from Rockwell Automation®.

Resource	Description
Preventive Maintenance of Industrial Control and Drive System Equipment, publication DRIVES-TD001	Provides a guide to performing preventive maintenance.
PowerFlex 70 Adjustable Frequency AC Drive User Manual, publication 20A-UM001	Provides the basic information that is needed to start up and troubleshoot the PowerFlex® 70 Adjustable Frequency AC Drive.
PowerFlex 70 EC and 700VC Reference Manual, publication PFLEX-RM004	Provides detailed drive information including operation, parameter descriptions, and programming.
PowerFlex 70 and 700 Adjustable Frequency AC drives Reference Manual, publication PFLEX-RM001	Provides detailed information for specifications and dimensions, operation, and dynamic brake selection for the drive.
PowerFlex 70 Adjustable Frequency AC Drive Installation Instructions, publication 20A-IN009	Provides the five basic steps that are needed to install and perform a basic start up of the PowerFlex 70 drive.
Wiring and Grounding Guidelines for Pulse Width Modulated (PWM) AC Drives, publication DRIVES-IN001	Provides the basic information that is needed to properly wire and ground Pulse Width Modulated (PWM) AC drives.
Communication adapter options, publications 20COMM-UMxxx	Provides the information to install the communication option kit based on the 20-COMM-X that is chosen. By searching the specific COMM card, a detailed description of the card features and parameters can be explored. These communication cards are optional and vary depending on configuration.
PowerFlex DriveGuard Safe Torque Off User Manual - Series B. publication PFLEX-UM003	Provides compatibility information for using the DriveGuard® Safe Torque Off option, with PowerFlex 40P or PowerFlex 70 drives and other safety components.
Industry Installation Guidelines for Pulse Width Modulated (PWM) AC Drives, publication DRIVES-AT003	Provides basic information for enclosure systems and environmental/location considerations (to help protect against environmental contaminants), and power and grounding considerations that are needed to properly install AC drives.
Safety Guidelines for the Application, Installation, and Maintenance of Solid State Control, publication SGI-1.1	Provides general guidelines for the application, installation, and maintenance of solid-state control.
Guarding Against Electrostatic Damage, publication 8000-4.5.2	Provides practices for guarding against Electrostatic damage (ESD)
Industrial Automation Wiring and Grounding Guidelines, publication 1770-4.1	Provides general guidelines for installing a Rockwell Automation industrial system.
Product Certifications website http://www.rockwellautomation.com/global/certification/overview.page	Provides declarations of conformity, certificates, and other certification details.

You can view or download publications at <http://www.rockwellautomation.com/literature/>. To order paper copies of technical documentation, contact your local Allen-Bradley distributor or Rockwell Automation sales representative.

Product Overview

PowerFlex 70 drives are designed to worldwide standards providing out-of-the-box performance around the globe. Available ratings include these options:

- 0.5...25 Hp output at 240V AC input
- 0.5...50 Hp output at 480V AC input
- 0.5...50 Hp output at 600V AC input

The PowerFlex 70 drive can be used with a full featured LCD human interface module (HIM) that provides multilingual text for start up, metering, programming, and troubleshooting.

The PowerFlex 70 can be programmed for either volts per hertz, sensorless vector, or vector control with FORCE™ Technology to cover a wide range of applications from fans to extruders.

Optional internal communication modules provide fast and efficient control and/or data exchange with host controllers over popular interfaces. These interfaces include: Connect Components Workbench, DeviceNet, Ethernet, ControlNet, serial communications, and other open control and communication networks. Computer tools such as DriveExplorer™ and DriveTools™ SP assist with programming, monitoring, and troubleshooting the PowerFlex 70.

TIP DriveTools™ SP Software has been upgraded to Connected Components Workbench™. DriveTools support can be found at the Product Compatibility Download Center <https://compatibility.rockwellautomation.com/Pages/home.aspx>, but is not longer available for sale.

Flexible Packaging and Mounting

- **IP20, NEMA / UL Type 1** – For conventional mounting inside or outside a control cabinet. Conduit plate is vertically removable for easy installation and replacement without disturbing conduit.
- **IP66, NEMA / UL Type 4X/12** (indoor use) – For mounting directly in the production environment. Listed by UL to resist dust, dirt, other contaminants, and to survive high-pressure water spray. Also certified by NSF International to verify conformity with international food equipment standards.
- **Flange Type** – For mounting heat sink through back of an enclosure, thus removing a large portion of the heat inside a cabinet. The backside is rated IP66, NEMA / UL Type 4X/12 for both indoor and outdoor use.
- **Zero-Stacking™ Drive** - Drives can be mounted directly next to one another with no reduction of ambient temperature rating (50 °C [122 °F] for IP20, NEMA / UL Type 1 and Flange Mount; 40 °C [104 °F] for IP66, NEMA / UL Type 4X/12).

Space Saving Hardware Features

- Integral electromagnetic compatibility (EMC) filtering provides a compact, all-in-one package solution for meeting EMC requirements, including CE in Europe.
- Integral dynamic brake transistor delivers a cost-effective means of switching regenerative energy without costly external chopper circuits.
- Internal dynamic brake resistor requires no extra panel space, and supplies a large amount of braking torque for short periods.
- Internal Communications allow the user to integrate the drive into the manufacturing process. Status indicators for all internal communication options are visible on the cover for easy setup and monitoring of drive communications. Users can easily manage information from shop floor to top floor and seamlessly integrate their complete system as they control, configure, and collect data.

Easy to Use Human Interface Tools

The PowerFlex 7-Class AC drives provide common human interface tools that are familiar and easy to use. These include the LCD human interface modules and computer-based configuration tools.

The LCD HIMs provide these features and functions:

- Large and easy to read 7-line x 21-character backlit display
- Variety of languages (English, French, German, Italian, Spanish, Portuguese, Dutch)
- Alternate function keys for shortcuts to common tasks
- ‘Calculator-like’ number pad for fast and easy data entry (full numeric version only)
- Control keys for local start, stop, speed, and direction
- Remote versions for panel mount application

Outstanding Control and Performance

- **Volt/Hertz** for simple Fan and Pump applications
- **Vector Control with FORCE™ Technology** provides outstanding torque and speed regulation, with or without encoder feedback.
- **Sensorless Vector Control** develops high torque over a wide speed range, and adapts to individual motor characteristics.

Drives Features

- Fast acting **Current Limit** and **Bus Voltage Regulation** result in maximum acceleration and deceleration without tripping.
- **Flying Start** delivers smooth connection into rotating loads, regardless of commanded direction, without the need for any speed feedback device.
- **PI Control** can eliminate the need for a separate process loop controller.
- **Inertia Ride-Through** offers tripless operation during a prolonged power outage by using the rotating energy that is stored in high-inertia, low-friction loads.
- **User Sets**, allowing up to three complete sets of parameter data, can be individually loaded for different batch processes.
- **Slip compensation** delivers minimum of 0.5% open-loop speed regulation across a wide speed range, eliminating the need for speed feedback devices in some applications.
- **Safe Torque Off**, the first offering available within the DriveGuard® series of safety solutions, prevents a drive from delivering rotational energy to motors by integrating a safety circuit with the drive's power switching signals. This solution meets EN ISO 13849-1, Category 3.
- **Droop Control** for load sharing applications.
- **Sleep/Wake Control** for analog control of start and stop.

Unsurpassed Capability in Network Communications

PowerFlex drives are fully compatible with the wide variety of Allen-Bradley® DPI™ (drive peripheral interface) communication adapters, offering the following benefits.

BACnet	DeviceNet	ControlNet	EtherNet/IP	Dual-Port EtherNet/IP	RS-485 DF1	PROFIBUS DP	LonWorks	Modbus RTU	Modbus TCP	Metasys N2	Siemens P1 FLN	Description
X	X	X	X	X								Unconnected Messaging permits other network devices (for example, PanelView™) to communicate directly to a drive without routing the communication through the network scanner.
X	X	X	X	X	X			X				Adapter Routing -- Plug personal computer into one drive and talk to other Allen-Bradley® drives on same network, without being routed through network scanner.
X	X	X	X	X	X	X	X	X	X	X	X	Access to 100% of all parameters over the network.
X	X		X	X		X						Autobaud capability makes initial connections less problematic.
X												Change Of State significantly reduces network traffic by configuring control messages to be sent only upon customer defined states. Flexible configuration for each node (for example, reference must change by more than 5%).
X			X	X								Peer Control provides master slave type control between drives, where one or more slave drives (consumers) can run based on the status of a master drive (producer), that can also significantly reduce network traffic.
X												Automatic Device Replacement (ADR) saves significant time and effort when replacing a drive, by allowing the scanner to be configured to automatically detect a new drive and download the required parameter settings.
X	X	X	X	X	X	X	X	X	X	X	X	Flexible Fault Configuration – Adapters can be programmed to take fault-based actions such as ramp to stop, coast to stop, and hold last state, and send user configurable logic control and speed reference values. In addition, different actions can be taken based on whether the network experienced a serious problem (broken cable) versus a network idle condition (PLC set to 'Program').

♣ Required only when HIM is used as handheld or remote.

▶ Required in addition to 20-HIM-H10 for distances up to a total maximum of 10 Meters (32.8 Feet).

Dynamic Brake Resistors

Small Duty Internal Dynamic Brake Resistors

Limited duty resistors mount directly to the back surface of the drive and require no extra panel space. Internal resistors are non-destructive and do not require a resistor overheat external safety circuit.

* Duty cycle listed is based on full speed to zero speed deceleration. For constant regen at full speed, duty cycle capability is half of what is listed. Application Type 1 represents maximum capability up to 100% braking torque where possible. Application Type 2 represents more than 100% braking torque where possible, up to a maximum of 150%.

* Always check resistor ohms against minimum resistance for drive being used.

	D and E	Not Available	

These resistors have a limited duty cycle. Refer to the PowerFlex Dynamic Braking Resistor Calculator Application Technique, publication [PFLEX-AT001](#), to determine if an internal resistor is sufficient. An external resistor may be required.

Medium Duty External Dynamic Brake Resistors

These resistors provide a larger duty cycle capability than the internal type. Includes an internal thermal switch for use in external safety circuit.

Communication Options

The sections that follow describe the communication options that are available.

Communication Option Kits

Description	Cat. No.
BACnet® MS/TP RS-485 Communication Adapter	20-COMM-B
ControlNet Communication Adapter (Coax)	20-COMM-C
DeviceNet Communication Adapter	20-COMM-D
EtherNet/IP Communication Adapter	20-COMM-E
Dual-Port EtherNet/IP Communication Adapter	20-COMM-ER
HVAC Communication Adapter	20-COMM-H
CANopen® Communication Adapter	20-COMM-K
LonWorks® Communication Adapter	20-COMM-L
Modbus/TCP Communication Adapter	20-COMM-M
PROFIBUS™ DP Communication Adapter	20-COMM-P
ControlNet Communication Adapter	20-COMM-Q
RS-485 DF1 Communication Adapter	20-COMM-S
External Communications Kit Power Supply	20-XCOMM-AC-PS1
DPI™ External Communications Kit	20-XCOMM-DC-BASE
External DPI I/O Option Board ⁽¹⁾	20-XCOMM-IO-OPT1
Compact I/O™ Module (3 Channel)	1769-SM1
Serial Null Modem Adapter	1203-SNM
Smart Self-powered Serial Converter (RS-232) includes 1203-SFC and 1202-C10 cables	1203-SSS
Universal Serial Bus (USB) Converter includes 2m USB, 20-HIM-H10, and 22-HIM-H10 cables	1203-USB

(1) For use only with DPI External Communications Kits 20-XCOMM-DC-BASE.

Other Options

Description	Cat. No.
DriveGuard Safe Torque Off Board	20A-DG01
5V/12V Encoder ⁽¹⁾	20A-ENC-1
115V AC Interface	AK-M9-115VAC-1
Frame E Flange Gasket	AK-M9-GASKET1-E4
Service Connection Board ⁽²⁾	SK-M9-SCB1

(1) Drive is not CE EMC certified when the encoder interface option is installed.

(2) Provides temporary DPI/HIM connection for NEMA/UL Type 1 and Flange drives with cover removed.

Terminators

Description ⁽¹⁾	Cat. No.
for use with 3.7 kW (5 HP) and below drives	1204-TFA1
for use with 1.5 kW (2 Hp) and up drives	1204-TFB2

(1) For selection information, refer to Wiring and Grounding Guidelines for Pulse-width Modulated (PWM) AC Drives, publication [DRIVES-IN001](#), Appendix A.

Reflected Wave Reduction Modules

Description ⁽¹⁾	Cat. No.
17 A with Common Mode Choke	1204-RWC-17-A
9 A without Choke, Book Mount ⁽²⁾	1204-RWR2-09-B
9 A, without Choke, Stack Mount ⁽²⁾	1204-RWR2-09-C

(1) For selection information, refer to Wiring and Grounding Guidelines for Pulse-width Modulated (PWM) AC Drives, publication [DRIVES-IN001](#), Appendix A.

(2) 1321-RWR products replace existing 1204-RWR products, 1204-RWRC modules (RWR and Common Mode Choke assembly) are still available.

Reflective Wave Reduction Devices

1321-RWR devices are used at the output of the drive to reduce dv/dt and motor terminal peak voltages

(1) Input line reactors were sized based on the NEC Fundamental Motor Amps. Output line reactors were sized based on the VFD rated output currents.

(2) 4% impedance.

Installation Considerations

Power Wiring

The PowerFlex 70 has the following built in protective features to help simplify installation:

- Ground fault protection during start up and running helps verify reliability
- Electronic motor overload protection increases motor life
- Removable MOV to ground and common mode capacitors to ground verify compatibility with ungrounded systems. These devices must be disconnected if the drive is installed on an ungrounded, high-resistance, or B phase grounded distribution system. These devices must also be disconnected if a regenerative unit is used as a bus supply or brake.
- 6 kV transient protection increased robustness for 380...480V system voltages

There are many other factors that must be considered for optimal performance in any given application. The block diagram below highlights the primary installation considerations. Consult Wiring and Grounding Guidelines for Pulse Width Modulated (PWM) AC Drives, publication [DRIVES-IN001](#), for detailed recommendations on input power conditioning, dynamic braking, reflected wave protection, and motor cables types.

Terminal Blocks

The sections that follow describe the information that is related to terminal blocks.

Terminal Block Specifications

No.	Name	Description	Frame	Wire Size Range ⁽¹⁾		Torque	
				Max, mm ² (AWG)	Min, mm ² (AWG)	Max, N·m (lb·in)	Recommended, N·m (lb·in)
1	I/O terminal block	Signal and control connections	All	1.5 (16)	0.05 (30)	0.55 (4.9)	0.5 (4.4)
2	Power terminal block	Input power and motor connections	A, B, and C	3.5 (12)	0.3 (22)	0.66 (5.5)	0.6 (5)
			D	8.4 (8)	0.8 (18)	1.7 (15)	1.4 (12)
			E	25.0 (3)	2.5 (14)	2.71 (24)	2.71 (24)
3	SHLD terminal	Terminating point for wiring shields	All	—	—	1.6 (14)	1.6 (14)

(1) Maximum/minimum sizes that the terminal block accepts - these are not recommendations.

Terminal	Description	Notes
BR1 BR2	DC brake (+) DC brake (-)	dB resistor connection - Important: Do not connect both an internal and external dB resistor simultaneously. This can violate the minimum allowed dB resistance and cause drive damage.
+DC -DC	DC bus (+) DC bus (-)	④ Test point on Frames A...D on the left or right of the power terminal block. Frame E has a dedicated terminal.
PE	PE ground	
U, V, W	U (T1), V (T2), W (T3)	To the motor
R, S, T	R (L1), S (L2), T (L3)	AC line input power

- (1) Contacts shown in unpowered state. Any relay that is programmed as Fault or Alarm is energized (pick up) when power is applied to drive and de-energize (drop out) when fault or alarm exists. Relays selected for other functions are energized only when that condition exists and are de-energize when condition is removed.
- (2) These inputs/outputs are dependent on a number of parameters. For information on related parameters, see publication, [20A-UM001](#).
- (3) For use with 115V AC circuitry. A 115V AC interface option (AK-M9-115VAC-1) must be used
- (4) Differential isolation - external source must be less than 10V with respect to PE.
- (5) Differential isolation - external source must be maintained at less than 160V with respect to PE. Input provides high common mode immunity.
- (6) Analog output current is only available with enhanced control drives.

Hardware Enable Circuitry

By default, you can program a digital input as an enable input. The status of this input is interpreted by drive software. If the application requires the drive to be disabled without software interpretation, a hardware enable configuration can be used. This is done by removing the enable jumper (ENBL JMP) and wiring the enable input to Digital In 6.

1. Remove drive cover.
2. Locate and remove the enable jumper on the main control board.
3. Wire the enable input to Digital In 6.
4. Verify that 366 [Digital In6 Sel] is set to option 1 Enable.

Safe Torque Off Board Terminal Block

No.	Signal	Description
1	Monitor - N.C.	Normally closed contacts for monitoring relay status. Maximum resistive load: 250V AC / 30V DC / 50V AC / 60 Watts Maximum inductive load: 250V AC / 30V DC / 25V AC / 30 Watts
2	Common - N.C.	
3	+24V DC	Connections for user-supplied power to energize coil.
4	24V common	

Connection Examples

For detailed connection examples refer to the DriveGuard Safe Torque Off Option (Series B) for PowerFlex 40P and PowerFlex 70 Enhanced Control AC Drives User Manual, publication [PFLEX-UM003](#).

Encoder Interface Terminal Block

No.	Signal	Description	Jumper Settings
1	5...12V power ⁽¹⁾	Internal power source 250 mA (isolated)	
2	Power return		
3	Encoder B (NOT)	Single channel or quadrature B input.	
4	Encoder B		
5	Encoder A (NOT)	Single channel or quadrature A input.	
6	Encoder A		

(1) Jumper selectable +5...12V is available on 20A-ENC-1 encoder boards.

Sample Encoder Wiring

Cable Recommendations

Cable Types Acceptable for 200...600V Installations

A variety of cable types are acceptable for drive installations. For many installations, unshielded cable is adequate, provided it can be separated from sensitive circuits. As an approximate guide, allow a spacing of 0.3 m (1 ft) for every 10 m (32.8 ft) of length. In all cases, long parallel runs must be avoided. Do not use cable with an insulation thickness less than or equal to 15 mils (0.4mm/0.015 in.). Use copper wire only. Wire gauge requirements and recommendations are based on 75 °C (167 °F). Do not reduce wire gauge when using higher temperature wire. See [208/240 Volt AC Three-phase Input Drive Ratings and Input Protection Devices on page 27](#).

Unshielded

Thermoplastic High Heat-resistant Nylon-coated (THHN), Thermoplastic Heat and Water-resistant Nylon-coated (THWN), or similar wire is acceptable for drive installation in dry environments as long as adequate free air space and/or conduit fill rate limits are provided. The wire must have a minimum insulation thickness of 15 mils (0.4 mm/0.015 in.) and cannot have large variations in insulation concentricity.

IMPORTANT Do not use THHN or similarly coated wire in wet areas.

Shielded/Armored Cable

Shielded cable contains the general benefits of multi-conductor cable with the added benefit of a copper braided shield that can contain much of the noise that is generated by a typical AC Drive. Use shielded cable for installations with sensitive equipment such as weigh scales, capacitive proximity switches, and other devices that can be affected by electrical noise in the distribution system. Applications with large numbers of drives in a similar location, imposed EMC regulations, or a high degree of communications/networking are also good candidates for shielded cable.

Shielded cable can also help reduce shaft voltage and induced bearing currents for some applications. In addition, the increased impedance of shielded cable can help extend the distance that the motor can be from the drive without the addition of motor protective devices, such as terminator networks. See *Reflected Wave in Wiring and Grounding Guidelines for PWM AC Drives*, publication [DRIVES-IN001](#).

Consider the general specifications of the environment of the installation, including temperature, flexibility, moisture characteristics, and chemical resistance. In addition, a braided shield can be included and be specified by the cable manufacturer as having coverage of at least 75%. An additional foil shield can greatly improve noise containment.

A good example of recommended cable is Belden 295xx (xx determines gauge). This cable has four Cross-linked Polyethylene (XLPE) insulated conductors with a 100% coverage foil and an 85% coverage copper braided shield (with drain wire) surrounded by a Polyvinyl Chloride (PVC) jacket.

Other types of shielded cable are available, but the use of these types can limit the allowable cable length. For example, some of the newer cables bundle four conductors of THHN wire and wrap them tightly with a foil shield. This type of construction can greatly increase the cable charging current that is required and reduce the overall drive performance. Unless specified in the individual distance tables as tested with the drive, these cables are not recommended and their performance against the lead length limits is not known.

Recommended Shielded Wire

Location	Rating/Type	Description
Standard (option 2)	Tray rated 600V, 90 °C (194 °F) RHH/RHW-2 Anixter OLF-7xxxxx or equivalent	Three tinned copper conductors with XLPE insulation. 5 mil single helical copper tape (25% overlap minimum) with three bare copper grounds in contact with the shield. PVC jacket.
Class I and II; Division I and II	Tray rated 600V, 90 °C (194 °F) RHH/RHW-2 Anixter 7V-7xxxx-3G or equivalent	Three bare copper conductors with XLPE insulation and impervious corrugated continuously welded aluminum armor. Black sunlight resistant PVC jacket overall. Three copper grounds on #10 AWG and smaller.

ATTENTION: To avoid a possible shock hazard that is caused by induced voltages, unused wires in the conduit must be grounded at both ends. Also, if a drive sharing a conduit is being serviced or installed, disable all of the drives that are using that conduit. Disabling all drives helps minimize the possible shock hazard from cross coupled motor leads.

Maximum Motor Cable Lengths

For information on maximum motor cable lengths, refer to the Wiring and Grounding Guidelines for Pulse Width Modulated (PWM) AC Drives, publication [DRIVES-IN001](#).

Power Ratings and Branch Circuit Protection

See the tables in this section for power ratings and branch circuit protection information.

Single-phase Input Power

The PowerFlex 70 drive is typically used with a three-phase input supply. Single-phase operation of the drive is rated under the UL 508C listing. Rockwell Automation has verified that single-phase operation with output current that is derated by 50% of the three-phase ratings that are identified in the tables in this section.

- (1) For IP 66 (NEMA / UL Type 4X/12) enclosures, drives listed as Frame A increase to Frame B and drives listed as Frame C increase to Frame D.
- (2) Minimum protection device size is the lowest rated device that supplies maximum protection without nuisance tripping.
- (3) Maximum protection device size is the highest rated device that supplies drive protection. For US NEC, minimum size is 125% of motor FLA. Ratings that are shown are maximum.
- (4) Circuit Breaker - inverse time breaker. For US NEC, minimum size is 125% of motor FLA. Ratings that are shown are maximum.
- (5) Maximum allowable rating by US NEC. Exact size must be chosen for each installation.
- (6) Motor Circuit Protector - instantaneous trip circuit breaker. For US NEC, minimum size is 125% of motor FLA. Ratings that are shown are maximum.
- (7) Bulletin 140M with adjustable current range must have the current trip set to the minimum range that the device does not trip.
- (8) Manual Self-Protected (Type E) Combination Motor Controller, UL Listed for 208 Wye or Delta, 240 Wye or Delta, 480Y/277 or 600Y/347. Not UL Listed for use on 480V or 600V Delta/Delta, corner ground, or high-resistance ground systems.
- (9) The AIC ratings of the Bulletin 140M Motor Protector Circuit Breakers can vary. See [Bulletin 140M Motor Protection Circuit Breakers Application ratings](#).
- (10) When using a Manual Self-Protected (Type E) Combination Motor Controller, the drive must be installed in a ventilated or non-ventilated enclosure with the minimum volume that is specified in this column. Application-specific thermal considerations can require a larger enclosure.

Mounting

This section includes information for mounting the drives.

Maximum Surrounding Air Temperature

Enclosure Rating	Temperature Range
Open Type, IP 20, NEMA / UL Type 1 and flange mount	0...50 °C (32...122 °F)
IP 66, NEMA / UL Type 4X/12	0...40 °C (32...104 °F)
IP 54, NEMA / UL Type 12	0...40 °C (32...104 °F)

IMPORTANT Some drives are equipped with an adhesive label on the top of the chassis. Removing the adhesive label from the drive changes the enclosure rating from NEMA / UL Type 1 Enclosed to Type Open.

Minimum Mounting Clearances

Specified vertical clearance requirements are intended to be from the drive to the closest object that can restrict airflow through the drive heat sink and chassis. The drive must be mounted in a vertical orientation as shown, and must make full contact with the mounting surface. Do not use standoffs or spacers. In addition, inlet air temperature must not exceed the product specification.

Clearances apply to all PowerFlex 70 Drives:

- Panel Mount
- Flange Mount
- NEMA Type 4X/12

D	248.4 (9.78)	350.0 (13.78)	178.6 (7.03)	123.0 (4.84)	55.6 (2.19)	—	9.25 (20.4)
E	280.3 (11.04)	555.8 (21.88)	207.1 (8.15)	117.2 (4.61)	89.9 (3.54)	—	18.60 (41.0)

(1) IP20 and IP66 frame E drives are manufactured with a flange-like heat sink with mounting holes.

(2) Frame E is also available in IP54 NEMA/UL Type 12 as a wall/machine mount.

(3) Weights include HIM and standard I/O.

IP20, NEMA / UL Type 1 Bottom View Dimensions, mm (in.)

- (1) Fan existence is dependent on drive rating and package style.
- (2) Flange style heat sink on NEMA1.

IP 66 (NEMA / UL Type 4X/12) Bottom View Dimensions, mm (in.)

- (1) DPI Port 2 is not accessible from outside of the drive standard. A service connection board (catalog number SK-M9-SCB1) is required.
- (2) Frame E is also available in IP54 NEMA/UL Type 12 as a wall/machine mount.

PowerFlex 70 Configured Drives

The PowerFlex 70 packaged drives program lets you create drive packages based on your specific needs. This program enhances standalone drive functionality through additional control, power, and packaging options that are ideal for original equipment manufacturers (OEM) and customers with special installation needs.

Catalog-configured Drives Program

The catalog configured drives program lets you create drive packages based on your specific needs. A complete drive package can be specified by assembling a single catalog number string that includes a base drive and all required options. Packaging is available for 480V requirements in NEMA Type 1 (IP20), NEMA 4/12 (IP65) indoor, and NEMA 3/4 (IP65) outdoor ratings. Focused on higher volume, repeat business, the standard designs provide consistent manufacturing and minimizes customer resources by reducing engineering, manufacturing, and installation time.

NEMA Type 1 NEMA Type 4/12 Indoor NEMA Type 3/4 Outdoor

- Enhanced control
- Flange mount drive
- Welded construction
- 480V rating

All Enclosure Types

- Drive input protection options
- Input/Output contactors
- Bypass options
- Input/Output line reactor options
- 115V control power options
- Control interface and feedback options
- Human interface modules
- Motor interface options
- Operator devices
- Drawing and test options

	Bus undervoltage fault level	281V DC	324V DC	540V DC	648V DC	810V DC	
	Nominal bus voltage	All Drives					
Protection	Heat sink thermistor	Monitored by microprocessor overtemp trip					
	Drive overcurrent trip						
	Software current limit	20...160% of rated current					
	Hardware current limit	200% of rated current (typical)					
	Instantaneous current limit	220...300% of rated current (dependent on drive rating)					
	Line transients	Up to 6000 volts peaks per IEEE C62.41-1991					
	Control logic noise immunity	Showering arc transients up to 1500V peak					
	Power ride-thru	15 milliseconds at full load					
	Logic control ride-thru	0.5 seconds minimum, 2 seconds typical					
	Ground fault trip	Phase-to-ground on drive output					
Short circuit trip	Phase-to-phase on drive output						
Environment	Altitude	1000 m (3300 ft) max without derating					
	Maximum surrounding air temperature without derating						
	IP20, NEMA / UL Type 1 flange mount	0...50 °C (32...122 °F) 0...50 °C (32...122 °F)					
	IP66, NEMA / UL Type 4X/12 (indoor)	0...40 °C (32...104 °F)					
	Cooling fan operation						
	Frames A and C	Fan operates when power is applied.					
	Frames B, D, and E	Fan operates when power is applied and in Run condition.					
	Storage temperature (all const.)	-40...+70 °C (-40...+158 °F)					
	Atmosphere	Important: Drive must not be installed in an area where the ambient atmosphere contains volatile or corrosive gas, vapors, or dust. If the drive is not going to be installed immediately, store the drive where it is not exposed to a corrosive atmosphere.					
	Relative humidity	5...95% noncondensing					
	Shock	15 g peak for 11 ms duration (±1.0 ms)					
	Vibration	0.152 mm (0.006 in.) displacement, 1 g peak					
Surrounding environment							
Pollution degree:							
Pollution degree 1 and 2	All enclosures are acceptable for pollution degree 1 and 2.						
Pollution degree 3 and 4	An enclosure that meets or exceeds IP54, NEMA / UL Type 12, is required for pollution degree 3 and 4.						
See Pollution Degree Ratings According to EN 61800-5-1 on page 41 for descriptions of pollution degree rating.							

Pollution Degree Ratings According to EN 61800-5-1

Pollution Degree	Description
1	No pollution or only dry non-conductive pollution occurs. The pollution has no influence.
2	Normally only non-conductive pollution occurs. Occasionally a temporary conductivity, caused by condensation, is expected when the drive is out of operation.
3	Conductive pollution or dry non-conductive pollution occurs, that becomes conductive due to condensation, and is expected.
4	The pollution generates persistent conductivity caused, for example, by conductive dust, rain, or snow.

Specifications

Category	Specification		
Electrical	Voltage tolerance	-10% of minimum, +10% of maximum. See the PowerFlex 70 Adjustable Frequency AC Drives User Manual, publication 20A-UM001 , for Full Power and Operating Range.	
	Input frequency tolerance	47...63 Hz	
	Input phases	Three-phase input provides full rating for all drives. Single-phase operation provides 50% of rated current.	
	Displacement power factor (all drives)	0.98 across speed range.	
	Efficiency	97.5% at rated amps, nominal line volts.	
	Maximum short circuit rating	200,000 amps symmetrical.	
	Max short circuit current rating (by using the recommended fuse or circuit breaker type)	Maximum short circuit current rating to match specified fuse/circuit breaker capability.	
	Drive to motor power ratio Minimum Maximum	Recommended not less than 1:2 ratio Recommended not greater than 2:1 ratio	
Control	Method	Sine coded PWM with programmable carrier frequency. Ratings apply to all drives.	
	Carrier frequency	2, 3, 4, 5, 6, 7, 8, 9, and 10 kHz E .	
		2, 4, 8, and 12 kHz E .	
		Drive rating based on 4 kHz.	
	Output voltage range	0 to rated motor voltage	
	Output frequency range	0...400 Hz E . 0...500 Hz E .	
	Frequency accuracy	Digital input	Within ±0.01% of set output frequency.
		Analog input	Within ±0.4% of maximum output frequency.
	Frequency control - speed regulation	with slip compensation (V/Hz mode)	0.5% of base speed across 40:1 speed range 40:1 operating range 10 rad/sec bandwidth
		with slip compensation (Sensorless Vector mode)	0.5% of base speed across 80:1 speed range 80:1 operating range 20 rad/sec bandwidth
		with feedback (Sensorless Vector mode) E	0.001% of base speed across 40:1 speed range 0.1% of base speed across 80:1 speed range 80:1 operating range 20 rad/sec bandwidth
	Speed control - speed regulation	without feedback (Vector Control mode) E	0.1% of base speed across 120:1 speed range 120:1 operating range 30 rad/sec bandwidth
		with feedback (Vector Control mode) E	0.001% of base speed across 120:1 speed range 1000:1 operating range 125 rad/sec bandwidth
	Torque regulation	without feedback +/-10% E	
		with feedback +/-5% E	
	Selectable motor control	Sensorless Vector with full tuning. Standard V/Hz with full custom capability and vector control.	
	Stop modes	Multiple programmable stop modes including - Ramp, Coast, DC-Brake, Fast Brake, Ramp-to-Hold, and S-curve.	
Accel/Decel	Two independently programmable accel and decel times. Each time can be programmed from 0...3600 seconds in 0.1 second increments		
Intermittent overload	110% Overload capability for up to 1 minute 150% Overload capability for up to 3 seconds		
Current limit capability	Proactive current limit programmable from 20...160% of rated output current. Independently programmable proportional and integral gain.		
Motor overload protection	Class 10 motor overload protection according to NEC article 430 and motor over-temperature protection according to NEC article 430.126 (A)(2). UL 508C File E59272.		

Specifications (continued)

Category	Specification	
Encoder	Type	Incremental, dual channel
	Supply	5V/12V Configurable $\pm 5\%$
	Quadrature	$90^\circ \pm 27^\circ$
	Duty cycle	50% + 10%
	Requirements ⁽¹⁾	Encoders must be line driver type, quadrature (dual-channel), or pulse (single-channel), single-ended or differential and capable of supplying a minimum of 10 mA per channel. The encoder interface board accepts 5V or 12V DC square-wave with a minimum high state voltage of 3.5V DC (5V mode) and 7.0V DC (12V mode). Maximum low state voltage is 1V DC (for both 5V and 12V modes). Maximum input frequency is 250 kHz.

(1) Drive is not CE EMC certified when the encoder interface option is installed.

(1) Worst case condition including Enhanced Control board, HIM, and Communication Module.

Voltage Tolerance

This section provides information to help you determine the voltage tolerance for your drive installation.

Voltage Tolerance⁽¹⁾

Drive Rating	Nominal Line Voltage	Nominal Motor Voltage	Drive Full Power Range	Drive Operating Range
200...240	200	200 ⁽²⁾	200...264	180...264
	208	208	208...264	
	240	230	230...264	
380...400	380	380 ⁽²⁾	380...528	342...528
	400	400	400...528	
	480	460	460...528	
500...600	600	575 ⁽²⁾	575...660	432...660

(1) Drive full power range = Nominal motor voltage to drive rated voltage +10%. Rated current is available across the entire drive full power range.

(2) Drive operating range = Lowest nominal motor voltage -10% to drive rated voltage +10%. Drive output is linearly derated when actual line voltage is less than the nominal motor voltage.

Example:

Calculate the maximum power of a 5 Hp, 460V motor connected to a 480V rated drive supplied with 342V actual line voltage input.

- Actual Line Voltage / Nominal Motor Voltage = 74.3%
- $74.3\% \times 5 \text{ Hp} = 3.7 \text{ Hp}$
- $74.3\% \times 60 \text{ Hz} = 44.6 \text{ Hz}$

At 342V actual line voltage, the maximum power the 5 Hp, 460V motor can produce is 3.7 Hp at 44.6 Hz.

Derating Guidelines

Follow these guidelines for derating your drive installation.

Altitude and Efficiency

Frame	Type	Derate
