42JS VisiSight Sensor

Features

42JS VisiSight™ sensors include the following features:

- Visible red LED for ease of alignment
- Complementary light and dark operate outputs
- Linear sensitivity adjustment knob or no adjustment models
- Optional snap-on adaptor enables 18 mm mount and facilitates easy sensor replacement
- IP67 rated enclosure

Available Models

- Polarized retroreflective
- Standard diffuse
- Fixed background suppression
- Transmitted beam

42JT VisiSight Sensor

Features

42JT VisiSight Sensors include the following features:

- Class 1 eye-safe red laser beam (for small object and contrast detection) and visible LED models
- Unique auto PNP/NPN output reduces stocking cost and simplifies selection, installation, and maintenance
- Teach push button for sensitivity and L.O./D.O. selection
- IP69K enclosure rating and ECOLAB tested to withstand food industry cleaning chemicals
- Laser etched markings for durability

Available Models

- Polarized retroreflective
- Standard diffuse
- Adjustable background suppression
- Transmitted beam
- Clear object
- Color mark

(1) Except for color mark sensors—color mark sensors have PNP or NPN (push-pull) output. This table shows status indication when output is connected as PNP. If connected as NPN, the yellow status indicator is ON when the output is deactivated and OFF when it is activated.

Figure 4 - Wiring Diagrams

- ❶ Normal operation: no connection.
Remote teach: See 42JT Remote Teach section.
Push button lock: connect to a -V. See the 42JT Push Button Lock/Unlock section.
- ❷ For Normal operation, white wire (pin 2) needs no connection. To disable light source, connect white wire (pin 2) to +V.
- ❸ Output is PNP or NPN (push-pull) for color mark sensors.

42JT Push Button Lock/Unlock

The push button or remote teach can be used to help prevent unauthorized users from changing teach settings.

To lock the push button press and release the button three times within three seconds. Both status indicators flash synchronously for three seconds, which indicates that the push button is now locked.

To unlock the push button press and release the button three times within three seconds. Both status indicators flash asynchronously for three seconds, which indicates that the push button is now unlocked.

To permanently lock the push button, connect the white wire (pin 2) to -V.

42JT Remote Teach

The sensor can be taught remotely via the white wire (pin 2). Connection to +V acts the same as the button being pressed and no connection is the same as the button not being pressed. The sensor can be taught by following the same teach/timing sequence as used in the push button teach (for example, connect to the +V for more than three seconds to teach the target, disconnect from the +V; remove the target and connect to the +V for less than one second to teach the no target condition. All push button functions can also be conducted via remote teach.

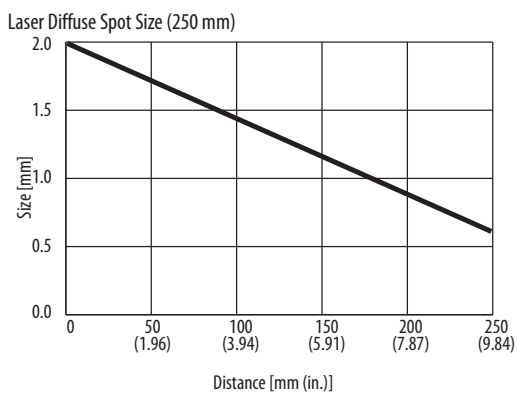

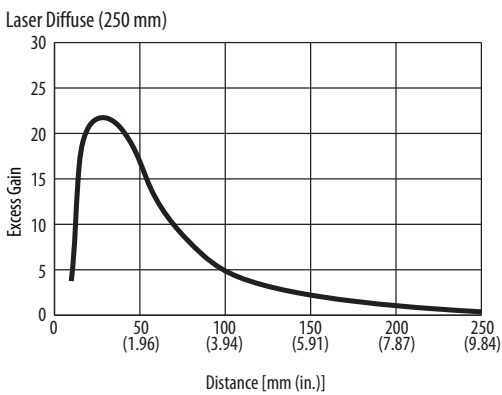

Figure 5 - Approximate Dimensions

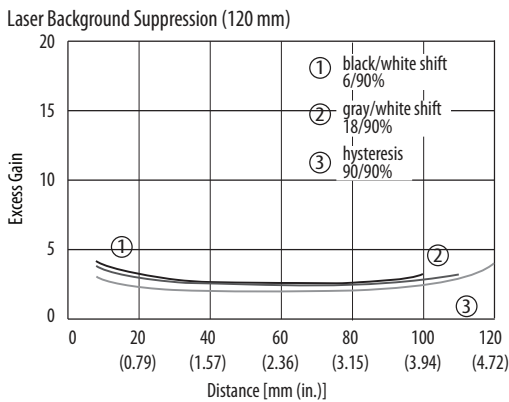

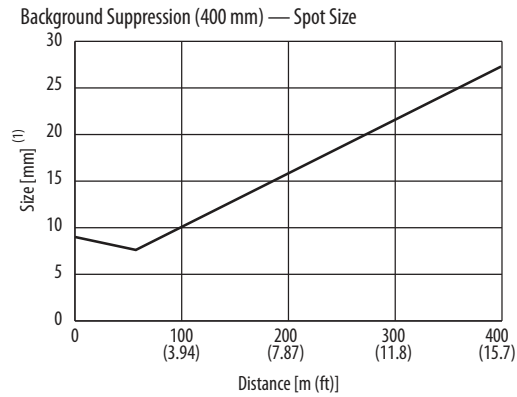

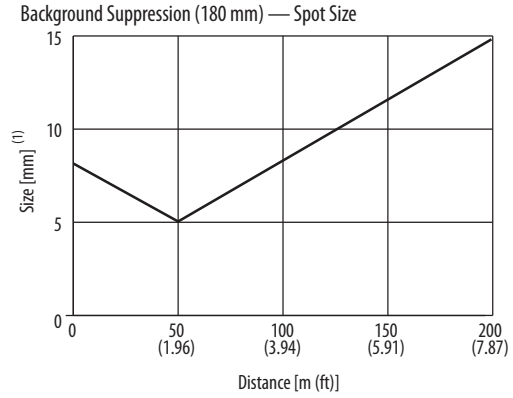

The 42JT mounting holes are located toward the rear end of the sensor while the 42JS mounting holes are located toward the front. Both sensors are compatible with the industry standard 25.4 mm mounting. The 42JT flexible mounting hole space range of 22.9...25.4 mm (0.9...1 in.) makes it compatible with the 24.1 mm (0.95 in.) hole space sensors.

See www.ab.com/e-tools for two-dimensional and three-dimensional CAD drawings.
