The FLEX 5000™ I/O architecture provides a wide range of input and output modules to span many applications, from high-speed digital to process control. The architecture uses Producer/Consumer technology that allows input information and output status to be shared among multiple Logix 5000™ controllers.

FLEX 5000 I/O systems are used as remote I/O modules with Logix 5000 controllers such as ControlLogix® 5580, CompactLogix™ 5380 and CompactLogix 5480. The modules are configured with the Studio 5000 Logix Designer® application.

The I/O modules require a terminal base (TB) assembly to connect field-side wiring. These are not included with the I/O modules. TBs consist of a mounting base (MB) and removable terminal block (RTB). MBs and RTBs are available for order individually.

### 5094-IF8 and 5094-IF8XT Analog 8-channel Current/Voltage Input Modules

This figure shows a wiring diagram for the 5094-IF8 and 5094-IF8XT modules when used in current mode. You must connect a 24V DC power source to the left SA+/- terminals to provide field-side power.

#### 5094-IF8 and 5094-IF8XT Wiring Diagram – 2-wire Current Mode

**IMPORTANT:** For proper operation and high immunity to electrical noise, always use Belden 8761 (shielded, twisted pair) or equivalent wire.

Place additional loop devices, for example, strip chart recorders, at either A location in the current loop.

**IMPORTANT:** The 5094-STB shield bar accessory is required in order to wire the shields for all analog I/O modules and HSC modules using the 5094-TB3 or 5094-TB3T terminal base assemblies. The 5094-STB shield bar accessory is available separately.
