

PowerFlex 400 AC Drive Packages for Fan & Pump Applications

Important User Information

Read this document and the documents listed in the additional resources section about installation, configuration, and operation of this equipment before you install, configure, operate, or maintain this product. Users are required to familiarize themselves with installation and wiring instructions in addition to requirements of all applicable codes, laws, and standards.

Activities including installation, adjustments, putting into service, use, assembly, disassembly, and maintenance are required to be carried out by suitably trained personnel in accordance with applicable code of practice.

If this equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

In no event will Rockwell Automation, Inc. be responsible or liable for indirect or consequential damages resulting from the use or application of this equipment.

The examples and diagrams in this manual are included solely for illustrative purposes. Because of the many variables and requirements associated with any particular installation, Rockwell Automation, Inc. cannot assume responsibility or liability for actual use based on the examples and diagrams.

No patent liability is assumed by Rockwell Automation, Inc. with respect to use of information, circuits, equipment, or software described in this manual.

Reproduction of the contents of this manual, in whole or in part, without written permission of Rockwell Automation, Inc., is prohibited.

Throughout this manual, when necessary, we use notes to make you aware of safety considerations.

WARNING: Identifies information about practices or circumstances that can cause an explosion in a hazardous environment, which may lead to personal injury or death, property damage, or economic loss.

ATTENTION: Identifies information about practices or circumstances that can lead to personal injury or death, property damage, or economic loss. Attentions help you identify a hazard, avoid a hazard, and recognize the consequence.

IMPORTANT

Identifies information that is critical for successful application and understanding of the product.

Labels may also be on or inside the equipment to provide specific precautions.

SHOCK HAZARD: Labels may be on or inside the equipment, for example, a drive or motor, to alert people that dangerous voltage may be present.

BURN HAZARD: Labels may be on or inside the equipment, for example, a drive or motor, to alert people that surfaces may reach dangerous temperatures.

ARC FLASH HAZARD: Labels may be on or inside the equipment, for example, a motor control center, to alert people to potential Arc Flash. Arc Flash will cause severe injury or death. Wear proper Personal Protective Equipment (PPE). Follow ALL Regulatory requirements for safe work practices and for Personal Protective Equipment (PPE).

This manual contains new and updated information.

New and Updated Information

This table contains the changes made to this revision.

Topic	Page
Updated the schematic drawings for the following drive packages to include the new circuit breaker:	
• 200 Hp, 460V AC Drives (Sheet 1 of 2) - NEMA/UL Type 1	103
• 200 Hp, 460V AC Drives (Sheet 2 of 2) - NEMA/UL Type 1	104
• 250...350 Hp, 460V AC Drives (Sheet 1 of 2) - NEMA/UL Type 1	105
• 250...350 Hp, 460V AC Drives (Sheet 2 of 2) - NEMA/UL Type 1	106
• 3.0...50 Hp, 208V AC & 3.0...150 Hp, 460V AC Drives (Sheet 1 of 2) - NEMA/UL Type 3R	115
• 3.0...50 Hp, 208V AC & 3.0...150 Hp, 460V AC Drives (Sheet 2 of 2) - NEMA/UL Type 3R	116
Updated the layout drawings for the following drive packages to include the new circuit breaker:	
• 3.0...5.0 Hp, 208V AC & 3.0...10 Hp, 460V AC Drives - NEMA/UL Type 1	122
• 7.5...10 Hp, 208V AC & 15...20 Hp, 460V AC Drives - NEMA/UL Type 1	123
• 25...30 Hp, 208V AC Drives - NEMA/UL Type 1	125
• 50...75 Hp, 460V AC Drives - NEMA/UL Type 1	126
• 40 Hp, 208V AC & 100 Hp, 460V AC Drives - NEMA/UL Type 1	127
• 50 Hp, 208V AC Drives - NEMA/UL Type 1	128
• 125...150 Hp, 460V AC Drives - NEMA/UL Type 1	129
• 200...250 Hp, 460V AC Drives - NEMA/UL Type 1	130
• 300...350 Hp, 460V AC Drives - NEMA/UL Type 1	131
• 3.0...5.0 Hp, 208V AC & 3.0...10 Hp, 460V AC Drives with Line Reactor - NEMA/UL Type 1	132
• 7.5...10 Hp, 208V AC & 15...20 Hp, 460V AC Drives with Line Reactor - NEMA/UL Type 1	133
• 15...20 Hp, 208V AC & 25...40 Hp, 460V AC Drives with Line Reactor - NEMA/UL Type 1	134
• 25 Hp, 208V AC Drives with Line Reactor - NEMA/UL Type 1	135
• 30 Hp, 208V AC Drives with Line Reactor - NEMA/UL Type 1	136
• 50...60 Hp, 460V AC Drives with Line Reactor - NEMA/UL Type 1	137
• 40...50 Hp, 208V AC & 75...100 Hp, 460V AC Drives with Line Reactor - NEMA/UL Type 1	138
Added new 460V AC, 250 Hp, 300 Hp, and 350 Hp disconnect switch part numbers to the Disconnect Parts table for the Style A/B Fused Disconnect Packages.	193
Added new 208V AC and 460V AC circuit breaker part numbers to the Disconnect Parts table for the Style M/N Circuit Breaker Packages.	196
Added new operator handle kit part numbers to the Disconnect Parts table for the Style M/N Circuit Breaker Packages.	196
Added new terminal lug part numbers to the Disconnect Parts table for the Style M/N Circuit Breaker Packages.	196
Add new Appendix C - History of Changes	205

History of Changes	Appendix C
	23C-IN001B-EN-P, June 2013 205

The purpose of this manual is to provide basic information needed to install, start-up and troubleshoot PowerFlex[®] 400 Adjustable Frequency AC Drive Packages for Fan & Pump Applications.

User documentation for the PowerFlex 400 Drive Packages for Fan & Pump Applications includes these Installation Instructions and the PowerFlex 400 User Manual, Publication 22C-UM001.... Both manuals are required to properly install and operate the PowerFlex 400 Adjustable Frequency AC Drive Packages for Fan & Pump Applications.

Who Should Use this Manual?

This manual is intended for qualified personnel. You must be able to program and operate Adjustable Frequency AC Drive devices. In addition, you must have an understanding of the parameter settings and functions.

What Is Not in this Manual

The PowerFlex 400 Adjustable Frequency AC Drive Packages for Fan & Pump Applications Installation Instructions is designed to provide only basic installation and operation information. For this reason, the following topics have not been included:

- Specifications
- Troubleshooting
- Startup
- Programming and Parameters

Please refer to the PowerFlex 400 User Manual for detailed drive information.

Additional Resources

These documents contain additional information concerning related products from Rockwell Automation.

Resource	Description
Wiring and Grounding Guidelines for Pulse Width Modulated (PWM) AC Drives, publication DRIVES-IN001	Provides the basic information needed to properly wire and ground Pulse Width Modulated (PWM) AC drives.
Preventive Maintenance of Industrial Control and Drive System Equipment, publication DRIVES-TD001	Contains a checklist that can be used as a guide to perform preventive maintenance on variable frequency AC drives.
PowerFlex 400 User Manual, publication 22C-UM001	Provides the basic information needed to install, start-up and troubleshoot the PowerFlex 400 Adjustable Frequency AC Drive.
Industrial Automation Wiring and Grounding Guidelines, publication 1770-4.1	Provides general guidelines for installing a Rockwell Automation industrial system.
Product Certifications website, http://www.ab.com	Provides declarations of conformity, certificates, and other certification details.

You can view or download publications at <http://www.rockwellautomation.com/literature/>. To order paper copies of technical documentation, contact your local Allen-Bradley distributor or Rockwell Automation sales representative.

Manual Conventions

- To help differentiate parameter names and LCD display text from other text, the following conventions will be used:
 - Parameter Names will appear in [brackets].
For example: [DC Bus Voltage].
 - Display Text will appear in “quotes.” For example: “Enabled.”
- The following words are used throughout the manual to describe an action:

Word	Meaning
Can	Possible, able to do something
Cannot	Not possible, not able to do something
May	Permitted, allowed
Must	Unavoidable, you must do this
Shall	Required and necessary
Should	Recommended
Should Not	Not recommended

General Precautions

ATTENTION: This drive contains ESD (Electrostatic Discharge) sensitive parts and assemblies. Static control precautions are required when installing, testing, servicing or repairing this assembly. Component damage may result if ESD control procedures are not followed. If you are not familiar with static control procedures, reference A-B publication 8000-4.5.2, "Guarding Against Electrostatic Damage" or any other applicable ESD protection handbook.

ATTENTION: An incorrectly applied or installed drive can result in component damage or a reduction in product life. Wiring or application errors, such as, undersizing the motor, incorrect or inadequate AC supply, or excessive ambient temperatures may result in malfunction of the system.

ATTENTION: Only qualified personnel familiar with adjustable frequency AC drives and associated machinery should plan or implement the installation, start-up and subsequent maintenance of the system. Failure to comply may result in personal injury and/or equipment damage.

ATTENTION: To avoid an electric shock hazard, verify that the voltage on the bus capacitors has discharged before performing any work on the drive. Measure the voltage at the drive (Refer to the PowerFlex 400 User Manual for test point locations). The voltage must be zero.

Catalog Number Explanation

The PowerFlex 400 Adjustable Frequency AC Drive Packages for Fan & Pump Applications catalog numbering scheme is shown below.

Outline Drawings	70

Style Explanation

- Style A = Fused Disconnect
- Style M = Circuit Breaker

Hardware Overview

The Main Input Disconnect Package (Style A/M) combines an Adjustable Frequency AC Drive with a means for disconnecting input power within a single package. Input power is connected to the PowerFlex drive through a door interlocked fuse disconnect switch or circuit breaker.

Main Disconnect Switch (DS1)

An Allen-Bradley Bulletin 194R Fused Disconnect Switch with lockable rotary mounted operator handle is provided. The disconnect switch is designed to meet disconnect switch requirements for branch circuit protection. The door mounted handle accepts up to three (3) padlocks.

Main Circuit Breakers (CB1)

A circuit breaker with lockable rotary-mounted operator handle is provided. The circuit breaker is provided to meet the requirements for branch circuit protection. The door-mounted handle accepts up to three padlocks.

Main Fuses (FU1-FU3)

ATTENTION: Most codes require that upstream branch circuit protection be provided to protect input power wiring. Install the fuses recommended in [Table 1](#). Do not exceed the fuse ratings. Failure to observe this precaution could result in damage to, or destruction of, the equipment.

Input line branch circuit protection fuses must be used to protect the input power lines. If input fuses are not provided with your drive, recommended fuse values are shown in [Table 1](#). The input fuse ratings listed in [Table 1](#) are applicable for one drive per branch circuit. No other load may be applied to that fused circuit.

The recommended fuse type for all PowerFlex 400 Drive Packages for Fan & Pump Applications is UL Class J.

Table 1 - Fuse Recommendations

Drive Rating			Fuse Rating
Input Voltage	kW	Hp	Amps
208V AC – 3-Phase	2.2	3.0	20
	3.7	5.0	20
	5.5	7.5	35
	7.5	10	40
	11	15	80
	15	20	100
	18.5	25	125
	22	30	150
	30	40	200
	37	50	250
460V AC – 3-Phase	2.2	3.0	10
	4.0	5.0	15
	5.5	7.5	20
	7.5	10	20
	11	15	35
	15	20	35
	18.5	25	60
	22	30	70
	30	40	80
	37	50	100
	45	60	150
	55	75	175
	75	100	200
	90	125	250
	110	150	350
	132	200	400
160	250	500	
200	300	600	
250	350	700	

Electrical Installation

Input Power Wiring

Use 75 °C rated copper conductors only for customer power wiring.

Refer to the PowerFlex 400 User Manual for additional detailed information about input power wiring recommendations and selection.

ATTENTION: Protect the contents of the options cabinet from metal chips and other debris while drilling the conduit openings. Failure to observe this precaution could result in damage to, or destruction of, the equipment.

ATTENTION: Do not route signal and control wiring with power wiring in the same conduit. This can cause interference with drive operation. Failure to observe this precaution could result in damage to, or destruction of, the equipment.

To connect AC input power to the drive package:

- ❑ 1. Select the proper wire size according to NEC and all applicable local codes and standards. Note that you must punch openings in the Option Cabinet of the desired conduit size, following NEC and all applicable local codes and standards. Power terminal block specifications are listed in [Table 2](#).
- ❑ 2. Connect the three-phase AC input power leads (three-wire VAC) to the appropriate terminals. Connect the AC input power leads to terminals L1, L2, L3 on the fused disconnect switch.
- ❑ 3. Tighten the AC input terminal power terminals to the proper torque according to drive type as shown in [Table 2](#).

Table 2 - AC Input Power Terminal Block Specifications

Volts AC	kW	Hp	Maximum Wire Size ⁽¹⁾	Minimum Wire Size	Recommended Torque
208V	2.2...3.7	3.0...5.0	8.4 mm ² (8 AWG)	2.5 mm ² (14 AWG)	4.0 N•m (35 lb•in)
	5.5...7.5	7.5...10	16.0 mm ² (4 AWG)	2.5 mm ² (14 AWG)	4.0 N•m (35 lb•in)
	11...15	15...20	33.6 mm ² (2 AWG)	2.5 mm ² (14 AWG)	17.5 N•m (155 lb•in)
	18.5...30	25...40	250 MCM	10.0 mm ² (6 AWG)	31.1 N•m (275 lb•in)
	37	50	350 MCM	35.0 mm ² (1/0 AWG)	31.1 N•m (275 lb•in)
460V	2.2...7.5	3.0...10	8.4 mm ² (8 AWG)	2.5 mm ² (14 AWG)	4.0 N•m (35 lb•in)
	11...18.5	15...25	16.0 mm ² (4 AWG)	2.5 mm ² (14 AWG)	4.0 N•m (35 lb•in)
	22...37	30...50	33.6 mm ² (2 AWG)	2.5 mm ² (14 AWG)	17.5 N•m (155 lb•in)
	45...75	60...100	250 MCM	10.0 mm ² (6 AWG)	31.1 N•m (275 lb•in)
	90...110	125...150	(2) 350 MCM	(2) 10.0 mm ² (6 AWG)	31.1 N•m (275 lb•in)
	132	200	(2) 350 MCM	(2) 35.0 mm ² (1/0 AWG)	31.1 N•m (275 lb•in)
	160...200	250...300	(2) 350 MCM	(2) 70.0 mm ² (3/0 AWG)	31.1 N•m (275 lb•in)
	250	350	(2) 400 MCM	(2) 70.0 mm ² (3/0 AWG)	31.1 N•m (275 lb•in)

(1) Maximum/minimum sizes that the terminal block will accept - these are not recommendations. If national or local codes require sizes outside the range, lugs may be used.

Output Power Wiring

Refer to the PowerFlex 400 User Manual for additional detailed information about output power wiring recommendations and selection.

ATTENTION: Unused wires in conduit must be grounded at both ends to avoid a possible shock hazard caused by induced voltages. Also, if a drive sharing a conduit is being serviced or installed, all drives using this conduit should be disabled to eliminate the possible shock hazard from cross-coupled motor leads. Failure to observe these precautions could result in bodily injury.

ATTENTION: Do not route signal and control wiring with power wiring in the same conduit. This can cause interference with drive operation. Failure to observe this precaution could result in damage to, or destruction of, the equipment.

To connect AC output power wiring from the drive to the motor:

- ❑ 1. Wire the three-phase AC output power motor leads by routing them according to the drive option type. Note that you must punch openings in the option cabinet of the desired conduit size, following NEC and all applicable local codes and standards. Power terminal block specifications are listed in [Table 3](#).

Do not route more than three sets of motor leads through a single conduit. This will minimize cross-talk that could reduce the effectiveness of noise reduction methods. If more than three drive/motor connections per conduit are required, shielded cable must be used. If possible, each conduit should contain only one set of motor leads.

- ❑ 2. Connect the three-phase AC output power motor leads to terminals U, V, W (T1, T2, T3) on the power terminal block located on the drive.
- ❑ 3. Tighten the three-phase AC output power terminals to the proper torque according to drive type as shown in [Table 3](#).

Table 3 - AC Output Power Terminal Block Specifications

Volts AC	kW	Hp	Maximum Wire Size ⁽¹⁾	Minimum Wire Size	Recommended Torque
208V	2.2...7.5	3.0...10	8.4 mm ² (8 AWG)	1.3 mm ² (16 AWG)	3.7 N•m (33 lb•in)
	11...22	15...30	33.6 mm ² (2 AWG)	8.4 mm ² (8 AWG)	5.1 N•m (45 lb•in)
	30...37	40...50	33.6 mm ² (2 AWG)	2.5 mm ² (14 AWG)	17.5 N•m (155 lb•in)
460V	2.2...15	3.0...20	8.4 mm ² (8 AWG)	1.3 mm ² (16 AWG)	3.7 N•m (33 lb•in)
	18.5...30	25...40	33.6 mm ² (2 AWG)	8.4 mm ² (8 AWG)	5.1 N•m (45 lb•in)
	37...45	50...60	33.6 mm ² (2 AWG)	3.5 mm ² (12 AWG)	5.6 N•m (49.5 lb•in)
	55...75	75...100	107.2 mm ² (4/0 AWG)	53.5 mm ² (1/0 AWG)	19.5 N•m (173 lb•in)
	90...110	125...150	300 MCM	70.0 mm ² (3/0 AWG)	19.5 N•m (173 lb•in)
	132...160	200...250	300 MCM	107.2 mm ² (4/0 AWG)	29.4 N•m (260 lb•in)
	200...250	300...350	500 MCM	300 MCM	40.0 N•m (354 lb•in)

(1) Maximum/minimum sizes that the terminal block will accept - these are not recommendations. If national or local codes require sizes outside the range, lugs may be used.

Control and Signal Wiring

Refer to the PowerFlex 400 User Manual for additional detailed information about control and signal wiring.

The Control I/O Terminal Block (TB1) and Relay Terminal Block (TB2) located on the drive Main Control Board provide terminals for interfacing customer supplied control inputs and outputs. All analog and discrete control wiring will be made at these terminals. Typical customer control and signal wiring is shown on the Interconnect Drawings [Figure 8](#) on page [29](#) and [Figure 9](#) on page [30](#).

To connect control and signal wiring to the drive package:

- ❑ **1.** Wire the control and signal leads by routing them according to the drive option type. Note that you must punch openings in the option cabinet of the desired conduit size, following NEC and all applicable local codes and standards. I/O terminal block specifications are listed in [Table 4](#).

Control and signal wires should be separated from power wires by at least 0.3 meters (1 foot).

- ❑ **2.** Connect the control and signal wiring to the I/O terminals located on the drive.
- ❑ **3.** Tighten the I/O terminals to the proper torque according to drive type as shown in [Table 4](#).

Table 4 - I/O Terminal Block Specifications

Voltage Rating	Maximum Wire Size ⁽¹⁾	Minimum Wire Size	Torque
208...460V AC	1.3 mm ² (16 AWG)	0.13 mm ² (26 AWG)	0.5...0.8 N·m (4.4...7 lb·in)

(1) Maximum/minimum sizes that the terminal block will accept - these are not recommendations.

(1) The default values of these parameters differ from Factory Defaults. Setting P041 [Reset To Defaults] to 1 "Factory Reset" will change these parameter settings to the defaults list in the PowerFlex 400 User Manual.

ATTENTION: Parameter A165 [Start At PowerUp] ships from the factory enabled. This feature allows a Run command to automatically cause the drive to resume running at commanded speed after drive input power is restored. Equipment damage and/or personal injury may result if this parameter is used in an inappropriate application. Do not use this function without considering applicable local, national and international codes, standards, regulations or industry guidelines.

Layout Drawings	122
Outline Drawings	159

Style Explanation

- Style B = Fused Disconnect
- Style N = Circuit Breaker

Hardware Overview

The 3 Contactor Full Feature Bypass with Disconnect Package (Style B/N) allows the motor to be manually transferred from drive output to the AC line, or from the AC line to the drive, while the motor is at zero (0) speed. The contactor bypass is electrically interlocked. A means for disconnecting input power via a door interlocked fuse disconnect switch is standard. In addition, this package is supplied with a bypass control interface which provides status indication and allows for remote activation of the bypass circuit.

Main Disconnect Switch (DS1)

An Allen-Bradley Bulletin 194R fused disconnect switch with lockable rotary mounted operator handle is provided. The disconnect switch is designed to meet disconnect switch requirements for branch circuit protection. The door-mounted handle accepts up to three (3) padlocks.

Main Circuit Breakers (CB1)

A circuit breaker with lockable rotary-mounted operator handle is provided. The circuit breaker is provided to meet the requirements for branch circuit protection. The door-mounted handle accepts up to three padlocks.

Main Fuses (FU1-FU3)

ATTENTION: Most codes require that upstream branch circuit protection be provided to protect input power wiring. Install the fuses recommended in [Table 5](#). Do not exceed the fuse ratings. Failure to observe this precaution could result in damage to, or destruction of, the equipment.

Input line branch circuit protection fuses must be used to protect the input power lines. If input fuses are not provided with your drive, recommended fuse values are shown in [Table 5](#). The input fuse ratings listed in [Table 5](#) are applicable for one drive per branch circuit. No other load may be applied to that fused circuit.

The recommended fuse type for all PowerFlex Drives for Fan and Pump Applications is UL Class J, 600V.

Table 5 - Fuse Recommendations

Drive Rating			Fuse Rating
Input Voltage	kW	Hp	Amps
208V AC – 3-Phase	2.2	3.0	20
	3.7	5.0	20
	5.5	7.5	35
	7.5	10	40
	11	15	80
	15	20	100
	18.5	25	125
	22	30	150
	30	40	200
	37	50	250
460V AC – 3-Phase	2.2	3.0	10
	4.0	5.0	15
	5.5	7.5	20
	7.5	10	20
	11	15	35
	15	20	35
	18.5	25	60
	22	30	70
	30	40	80
	37	50	100
	45	60	150
	55	75	175
	75	100	200
	90	125	250
	110	150	350
	132	200	400
	160	250	500
200	300	600	
250	350	700	

Contactors (DIC, DOC, BC)

Allen-Bradley Bulletin 100 Contactors are provided for all ratings. The contactors function as follows:

1. Drive-input contactor (DIC) opens and closes input to the drive.
2. Drive-output contactor (DOC) opens and closes the connection between the drive and the motor.
3. Bypass contactor (BC) opens and closes the connection to line-start the motor.

Motor Overload Relay (OL)

The motor overload relay is set at the factory to 100% of the drive output current. In many cases, this setting matches the motor full load amps (FLA). However, before starting the drive, you should check the setting on the motor overload relay to assure that it is set properly for your motor.

- For motors with a service factor less than 1.15, set the motor overload relays to 0.9x motor FLA.
- For motors with a service factor equal to, or greater than 1.15, set the motor overload relay to the motor FLA.

Figure 66 - Setting Motor Overload

Table 6 - Overload Ratings

Drive Rating			Overload Rating	
Input Voltage	kW	Hp	Trip Class	Adjustment Rating (Amps)
208V AC – 3-Phase	2.2	3.0	20	3.2 - 16

160	250	20	100 - 500	
200	300	20	100 - 500	
250	350	20	100 - 500	

Control Transformer (T1)

115V AC control power is obtained via a supplied control power transformer. The control transformer is fused on the primary.

Bypass Control Interface (CP1)

The operator interface on the bypass option box shows the following LEDs:

- Ready (green) - On when power is applied to the drive-bypass unit.
- Interlock Open (amber) - On when the customer interlock or Aux Fault is de-energized.
- Bypass Run (green) - On when the bypass contactor (BC) is energized.
- Bypass Trip (red) - On when a bypass fault condition exists (for example, bypass motor overload has tripped).
- Purge (amber) - On when the purge condition is active.
- Drive Output Enable (Green) - On when the drive output contactor (DOC) is energized.

In addition, the Bypass Control Interface contains two selector switches. Selector Switch 1 (SS1) determines the state of the DIC, DOC and BC contactors. Selector Switch 2 (SS2) determines the source of control logic.

Figure 67 - Bypass Control Interface

Electrical Installation

Input Power Wiring

Use 75 °C rated copper conductors only for customer power wiring.

Refer to the PowerFlex 400 User Manual for additional detailed information about input power wiring recommendations and selection.

ATTENTION: Protect the contents of the options cabinet from metal chips and other debris while drilling the conduit openings. Failure to observe this precaution could result in damage to, or destruction of, the equipment.

ATTENTION: Do not route signal and control wiring with power wiring in the same conduit. This can cause interference with drive operation. Failure to observe this precaution could result in damage to, or destruction of, the equipment.

To connect AC input power to the drive package:

- ❑ 1. Select the proper wire size according to NEC and all applicable local codes and standards. Note that you must punch openings in the Option Cabinet of the desired conduit size, following NEC and all applicable local codes and standards. Power terminal block specifications are listed in [Table 7](#).
- ❑ 2. Connect the three-phase AC input power leads (three-wire VAC) to the appropriate terminals. Connect the AC input power leads to terminals L1, L2, L3 on the fused disconnect switch.
- ❑ 3. Tighten the AC input terminal power terminals to the proper torque according to drive type as shown in [Table 7](#).

Table 7 - AC Input Power Terminal Block Specification

Volts AC	kW	Hp	Maximum Wire Size ⁽¹⁾	Minimum Wire Size	Recommended Torque

	160...200	250...300	(2) 350 MCM	(2) 70.0 mm ² (3/0 AWG)	31.1 N•m (275 lb•in)
	250	350	(2) 400 MCM	(2) 70.0 mm ² (3/0 AWG)	31.1 N•m (275 lb•in)

(1) Maximum/minimum sizes that the terminal block will accept - these are not recommendations. If national or local codes require sizes outside the range, lugs may be used.

Output Power Wiring

Refer to the PowerFlex 400 User Manual for additional detailed information about output power wiring recommendations and selection.

ATTENTION: Unused wires in conduit must be grounded at both ends to avoid a possible shock hazard caused by induced voltages. Also, if a drive sharing a conduit is being serviced or installed, all drives using this conduit should be disabled to eliminate the possible shock hazard from cross-coupled motor leads. Failure to observe these precautions could result in bodily injury.

ATTENTION: Do not route signal and control wiring with power wiring in the same conduit. This can cause interference with drive operation. Failure to observe this precaution could result in damage to, or destruction of, the equipment.

To connect AC output power wiring from the drive to the motor:

- ❑ 1. Wire the three-phase AC output power motor leads by routing them according to the drive option type. Note that you must punch openings in the option cabinet of the desired conduit size, following NEC and all applicable local codes and standards. Output power terminal block specifications are listed in [Table 8](#).

Do not route more than three sets of motor leads through a single conduit. This will minimize cross-talk that could reduce the effectiveness of noise reduction methods. If more than three drive/motor connections per conduit are required, shielded cable must be used. If possible, each conduit should contain only one set of motor leads.

- ❑ 2. Connect the three-phase AC output power motor leads to terminals T1, T2, T3 on the output power terminal block (TB2) located inside the option cabinet.
- ❑ 3. Tighten the three-phase AC output power terminals to the proper torque according to drive type as shown in [Table 8](#).

Table 8 - Output Power Terminal Block Specification

Volts AC	kW	Hp	Maximum Wire Size ⁽¹⁾	Minimum Wire Size	Recommended Torque
208V	2.2...5.5	3.0...7.5	8.4 mm ² (8 AWG)	0.5 mm ² (22 AWG)	1.5 N•m (13 lb•in)
	7.5...15	10...20	16.0 mm ² (4 AWG)	2.5 mm ² (14 AWG)	2.3 N•m (20 lb•in)
	18.5...22	25...30	35.0 mm ² (1/0 AWG)	2.5 mm ² (14 AWG)	2.5 N•m (22 lb•in)
	30...37	40...50	350 MCM	10.0 mm ² (6 AWG)	31.1 N•m (275 lb•in)
460V	2.2...5.5	3.0...7.5	8.4 mm ² (8 AWG)	0.5 mm ² (22 AWG)	1.5 N•m (13 lb•in)
	7.5...22	10...30	16.0 mm ² (4 AWG)	2.5 mm ² (14 AWG)	2.3 N•m (20 lb•in)
	30...55	40...75	35.0 mm ² (1/0 AWG)	2.5 mm ² (14 AWG)	2.5 N•m (22 lb•in)
	75	100	350 MCM	10.0 mm ² (6 AWG)	31.1 N•m (275 lb•in)
	90...110	125...150	350 MCM	10.0 mm ² (6 AWG)	31.1 N•m (275 lb•in)
	132...160	200...250	300 MCM	107.2 mm ² (4/0 AWG)	29.4 N•m (260 lb•in)
	200...250	300...350	500 MCM	300 MCM	40.0 N•m (354 lb•in)

(1) Maximum/minimum sizes that the terminal block will accept - these are not recommendations. If national or local codes require sizes outside the range, lugs may be used.

Control and Signal Wiring

Refer to the PowerFlex 400 User Manual for additional detailed information about control and signal wiring.

The Signal Terminal Block (TB1 Terminals 1...20 and R1...R6) located on the drive Main Control Board and Control Terminal Block (TB1 Terminals 31...40) located inside the Option Cabinet provide terminals for interfacing customer supplied control inputs and outputs. All analog and discrete control wiring will be made at these terminals. Typical customer control and signal wiring is shown on the Interconnect drawings, [Figure 84](#) on page 117 and [Figure 87](#) on page 120.

To connect control and signal wiring to the drive package:

- ❑ 1. Wire the control and signal leads by routing them according to the drive option type. Note that you must punch openings in the option cabinet of the desired conduit size, following NEC and all applicable local codes and standards. Control and signal terminal block specifications are listed in [Table 9](#).

Control and signal wires should be separated from power wires by at least 0.3 meters (1 foot).

- ❑ 2. Connect the analog and relay output signal wiring to terminals 1...20 and R1...R6 located on the drive Main Control Board.
- ❑ 3. Connect the control wiring listed below to terminals 31...40 located inside the Option Cabinet.
 - Interlock
 - Freeze/Fire Stats
 - Autostart
 - Bypass
 - Purge
 - Bypass Running
- ❑ 4. Tighten the control and signal terminals to the proper torque according to drive type as shown in [Table 9](#).

Table 9 - Control and Signal Terminal Block Specifications

Voltage Rating	Terminals	Location	Maximum Wire Size ⁽¹⁾	Minimum Wire Size	Torque
208...460V AC	1...20, R1...R6	Main Control Board	1.3 mm ² (16 AWG)	0.13 mm ² (26 AWG)	0.5-0.8 N•m (4.4-7 lb•in)
	31...40	Option Cabinet	4.0 mm ² (10 AWG)	0.5 mm ² (22 AWG)	0.6 N•m (5.0 lb•in)

(1) Maximum/minimum sizes that the terminal block will accept - these are not recommendations.

Customer Connections

The 3 Contactor Full Feature Bypass with Disconnect Package is set up to accommodate the following customer supplied contacts. Contacts should be rated for 120V AC.

Interlock

The “Interlock” input functions as an Enable input when operating in either Drive or Bypass mode. Opening of the “Interlock” input (T31-T32) will prevent the drive/motor from running. T31-T32 are shipped jumpered together (with a jumper wire) from the factory. If it is desirable to use the “Interlock” input, this jumper wire can be removed and appropriate customer contacts wired in. If a valid “Autostart” or “Bypass” contact is present, the drive/motor will immediately run upon the closing of the “Interlock” input.

Freeze/Fire Stat

The “Freeze/Fire Stat” input functions as a system fault input when operating in either Drive or Bypass mode. Opening of the “Freeze/Fire Stat” input (T31-T33) will prevent the drive/motor from running. T31-T33 are shipped jumpered together (with a jumper wire) from the factory. If it is desirable to use the “Freeze/Fire Stat” input, the jumper wire can be removed and appropriate customer contacts wired in. If the “Freeze/Fire Stat” input opens while operating in Drive mode, the drive will fault and require a manual reset to restart once the input closes. If the “Freeze/Fire Stat” input opens while operating in Bypass mode, the motor will coast to a stop and immediately run upon the re-closing of the input.

Autostart

The “Autostart” input is used to remotely start the drive when SS1 is in the DRIVE position and SS2 is in the AUTO position. A closed input to terminals 34-35 will start the drive.

Bypass

The “Bypass” input is used to remotely start the motor across the 3-phase AC line when SS1 is in the BYPASS position and SS2 is in the AUTO position. A closed input to terminals 34-36 will start the motor.

See [Figure 67](#) on page [91](#) for details on selector switch location.

Purge

A “Purge” input can be wired to terminals 37-38. When this input is closed, the motor will run at the Purge Frequency, which is defined by Parameter A141 [Purge Frequency], assuming the following conditions exist.

- SS1 is either in the DRIVE or BYPASS position.
- SS2 is either in the HAND or AUTO position if Jumper P1 on the Bypass Control Panel (CP1) is in position A.
- SS2 is in the HAND, MOTOR OFF or AUTO position if Jumper P1 on the Bypass Control Panel (CP1) is in Position B.
- Interlock wired to terminals 31-32 is closed.
- Freeze/Fire Stat wired to terminals 31-33 is closed.

ATTENTION: A Purge command will take precedence over a Stop command from the Comm Port/Network. Insure that another stop method is available if stopping is necessary during a purge.

Bypass Running

The “Bypass Running” contact is normally open. When the Bypass Contactor (BC) is closed the “Bypass Running” contact will also be closed.

Operating Modes

Selector Switch 1 (SS1) and Selector Switch 2 (SS2), located on the Bypass Control Panel (CP1), are used to determine the operating state of the 3 Contactor Full Feature Bypass with Disconnect Package. SS1 is used to select motor control:

- DRIVE = Drive keypad/terminal block controls the motor
- DRIVE TEST = Drive is powered but is not controlling the motor
- BYPASS = Motor runs across 3-Phase line

Jumper P2 on the Bypass Control Panel (CP1) allows the drive to be powered while running in bypass. This is accomplished by moving Jumper P2 to position B-C and turning SS1 from BYPASS to DRIVE TEST. If Jumper P2 is in position A-B, the drive cannot be powered while running in bypass. SS2 selects the source of the Start, Stop, and Drive Speed Reference as defined in [Table 10](#).

Table 10 - Command and Reference Selection

SS1 ⁽¹⁾ Selection	SS2 ⁽¹⁾ Selection	Start Command ⁽²⁾			Stop Command			Drive Speed Reference ⁽³⁾		
		TB	Keypad	None	TB	Keypad	None	TB	Keypad	None
DRIVE	HAND									
	MOTOR OFF									
	AUTO									
DRIVE TEST	HAND									
	MOTOR OFF									
	AUTO									
BYPASS	HAND	Automatically Starts			Automatically Starts			Motor Runs at Base Speed		
	MOTOR OFF									
	AUTO							Motor Runs at Base Speed		

(1) See [Figure 67](#) on page 91 for details on selector switch location.

(2) When “Auto” is selected, the Start Command is defined by P036 [Start Source]. Factory default is configured for terminal block control. Refer to the PowerFlex 400 User Manual for other control schemes.

(3) When “Auto” is selected, the Speed Reference is defined by P038 [Speed Reference]. Analog In1 has control by factory default. Refer to the PowerFlex 400 User Manual for other control schemes.

(1) The default values of these parameters differ from Factory Defaults. Setting P041 [Reset To Defaults] to 1 "Factory Reset" will change these parameter settings to the defaults listed in the PowerFlex 400 User Manual.

ATTENTION: Parameter A165 [Start At PowerUp] ships from the factory enabled. This feature allows a Run command to automatically cause the drive to resume running at commanded speed after drive input power is restored. Equipment damage and/or personal injury may result if this parameter is used in an inappropriate application. Do not use this function without considering applicable local, national and international codes, standards, regulations or industry guidelines.

Mechanical Installation

This chapter provides information on mounting a PowerFlex Drive Package for Fan and Pump Applications.

Topic	Page
Mounting Considerations	177
Lifting and Mounting the Drive	180
Watts Loss	181
Weights	182

ATTENTION: The following information is merely a guide for proper installation. The Allen-Bradley Company cannot assume responsibility for the compliance or the noncompliance to any code, national, local or otherwise for the proper installation of this drive or associated equipment. A hazard of personal injury and/or equipment damage exists if codes are ignored during installation.

Mounting Considerations

Environment

Before deciding on an installation site, verify that the PowerFlex Drive Packages can be kept clean, cool and dry. The drives should be kept away from oil, coolants or other airborne contaminants.

Maximum Surrounding Air Temperature

PowerFlex Drive Packages for Fan and Pump Applications are designed to operate at 0...40 °C (32...104 °F) surrounding air temperature.

Minimum Mounting Clearances

Be sure there is adequate clearance for air circulation around the drive. For best air movement, do not mount drives directly above each other. Note that no devices are to be mounted behind the drive. This area must be kept clear of all control and power wiring.

Figure 144 - NEMA/UL Type 1 Minimum Mounting Clearances

Figure 145 - NEMA/UL Type 12 Minimum Mounting Clearances

Figure 146 - NEMA/UL Type 4 Minimum Mounting Clearances

Figure 147 - NEMA/UL Type 3R Minimum Mounting Clearances

Lifting and Mounting the Drive

Care should be used to prevent damage due to dropping or jolting when moving the drive. A fork lift truck or similar means of lifting and transporting may be used. Sling in a manner that will equalize the load at the pickup points. Use a spreader bar if the angle of the sling is less than 45 degrees relative to horizontal. Do not jolt while lifting.

Figure 148 - Lifting the Drive

Use the following procedure to lift and mount the drive.

1. Attach a sling with safety hooks or clevis clamps to the two lifting holes. Make certain that the angle of the sling is not less than 45 degrees relative to horizontal.
2. Using an overhead or portable hoist, attach a free-fall chain to the chain secured to the drive. Take up any vertical slack in the chain.
3. Using the hoist, lift the drive from the horizontal shipping pallet.
4. Position the drive.
5. Attach the drive to a vertical surface using the mounting holes provided. Use washers under the bolt heads.

Watts Loss

The following table lists watt loss data for PowerFlex Drive Packages for Fan and Pump Applications running at full load, full speed and a factory default PWM frequency of 4kHz.

Table 11 - Watts Loss at Full Load/Speed, 4 kHz

Voltage	kW	Hp	Total Watts

Notes:

Electrical Installation

This chapter provides information on electrical installation of a PowerFlex Drive Package for Fan and Pump Applications.

Topic	Page
Power Wire Size Requirements	185
Power Terminal Block Specification	185
Control and Signal Wiring	186
Installing Input Power Wiring	186
Installing Output Power Wiring	187
Installing an Optional Transformer or Reactor	187

Power Wire Size Requirements

Wire size should be determined based on the size of the conduit openings, and applicable local, national and international codes such as NEC/CEC.

ATTENTION: National codes and standards (NEC, VDE, BSI, etc.) and local codes outline provisions for safely installing electrical equipment. Installation must comply with specifications regarding wire types, conductor sizes, branch circuit protection, and disconnect devices. Failure to do so may result in personal injury and/or equipment damage.

Power Terminal Block Specification

Input power wiring should be sized according to applicable codes to handle the drive's continuous-rated input current. Output wiring should be sized according to applicable codes to handle the drive's continuous-rated output current. See [Table 14](#) for the range of power wire sizes that the terminals can accommodate.

Table 14 - Power Wire Sizes

Name	Package Style	Hp		Wire Size Range		Torque
		208V AC	480V AC	Minimum	Maximum	
Input Power L1(R), L2 (S), L3 (T)	A & B	3...5	3...10	14 AWG	8 AWG	12
		7.5...10	15...25	14 AWG	4 AWG	35
		15...20	30...50	14 AWG	2 AWG	35

		—	—	—	—	—

(1) Threaded studs provided for wire lugs.

Control and Signal Wiring

The terminal block on the Main Control board provides terminals for 24 V DC power for the eight remote control inputs and outputs. The terminal block in the options cabinet provides terminals for 115 V AC power for the remote control inputs and outputs. The options cabinet terminal block is factory-wired to the terminal block on the Main Control board.

Installing Input Power Wiring

ATTENTION: Protect the contents of the options cabinet from metal chips and other debris while drilling the conduit openings. Failure to observe this precaution could result in damage to, or destruction of, the equipment.

ATTENTION: Do not route signal and control wiring with power wiring in the same conduit. This can cause interference with drive operation. Failure to observe this precaution could result in damage to, or destruction of, the equipment.

To connect AC input power to the drive:

- ❑ Step 1. Wire the AC input power leads by routing them according to drive type. Power wiring sizes are listed in [Table 14](#) on page [185](#).
- ❑ Step 2. Connect the three-phase AC input power leads (three-wire V AC) to the appropriate terminals. Connect the AC input power leads to terminals R/L1, S/L2, T/L3 on the power terminal block.
- ❑ Step 3. Tighten the AC input power terminals to the proper torque according to drive type as shown in [Table 14](#) on page [185](#).

Installing Output Power Wiring

ATTENTION: Unused wires in conduit must be grounded at both ends to avoid a possible shock hazard caused by induced voltages. Also, if a drive sharing a conduit is being serviced or installed, all drives using this conduit should be disabled to eliminate the possible shock hazard from cross-coupled motor leads. Failure to observe these precautions could result in bodily injury.

ATTENTION: Do not route signal and control wiring with power wiring in the same conduit. This can cause interference with drive operation. Failure to observe these precautions could result in damage to, or destruction of, the equipment.

To connect the AC output power wiring from the drive to the motor:

- ❑ Step 1. Wire the three-phase AC output power motor leads by routing them according to the drive option type. Note that you must punch openings in the option cabinet of the desired conduit size, following NEC and all applicable local codes and standards.

Do not route more than three sets of motor leads through a single conduit. This will minimize cross-talk that could reduce the effectiveness of noise reduction methods. If more than three drive/motor connections per conduit are required, shielded cable must be used. If possible, each conduit should contain only one set of motor leads.

- ❑ Step 2. Connect the three-phase AC output power motor leads to terminals U/T1, V/T2, W/T3 on the power terminal block located in the options cabinet.
- ❑ Step 3. Tighten the three-phase AC output power terminals to the proper torque according to drive type as shown in [Table 16](#) or [Table 17](#) on page [189](#).

The following sections describe incoming line components and how to install them. Note that fuses and an input disconnect are also available as factory-installed options.

Installing an Optional Transformer or Reactor

Input isolation transformers might be needed to help eliminate:

- Damaging AC line voltage transients from reaching the drive.
- Line noise from the drive back to the incoming power source.
- Damaging currents that could develop if a point inside the drive becomes grounded.

Observe these guidelines when installing an isolation transformer:

- A power disconnecting device must be installed between the power line and the primary of the transformer.
- If the user-installed power disconnecting device is a circuit breaker, the circuit breaker trip rating must be coordinated with the in-rush current (10 to 12 times full load current) of the transformer.
- Do not use an input isolation transformer rated more than 1000 kVA for 480 V AC (500 kVA for 208 V AC) with less than 5% impedance directly ahead of the drive without additional impedance between the drive and the transformer.

[Table 15](#) shows recommended inductance and line reactor ratings.

Table 15 - AC Line Reactors

Drive (Hp)	Line Reactor Inductance ($\pm 10\%$)
2...3	6.5 mH
5	3.0 mH
7.5	2.5 mH
10	1.5 mH
15	1.2 mH
20	0.8 mH
25	0.8 mH
30	0.7 mH
40	0.5 mH
50 to 60	0.4 mH
75	0.3 mH
100	0.2 mH
125	0.15 mH
150	0.11 mH

Installing Fuses for Branch Circuit Protection

If they were not installed as a factory option, install the required branch circuit protection fuses according to the applicable local, national, and international codes (such as NEC/CEC). The fuses must be installed in the line before the drive input terminals.

ATTENTION: Most codes require that upstream branch protection be provided to protect input power wiring. Failure to observe this precaution could result in severe bodily injury or loss of life.

Installing the Required External/Separate Input Disconnect

An input disconnect must be installed in the line before the drive input terminals in accordance with local, national, and international codes, such as NEC/CEC. If an input disconnect is not installed as a factory option, the disconnect should be sized according to the in-rush current as well as any additional loads the disconnect might supply. The trip rating for the in-rush current (10 to 12 times full load current) should be coordinated with that of the input isolation transformer, if used.

Installing Input/Output Power Wiring

Table 16 - Style A Terminals

208V AC Hp	480V AC Hp	Maximum Tightening Torque

Description	Designation	Voltage	Hp	Part Number
Control Transformer	T1	208V AC	3.0...20	TA-2-54525 ⁽¹⁾
			25...30	TA-2-81202 ⁽¹⁾
			40...50	TA-2-81203 ⁽¹⁾
		460V AC	3.0...5.0	TA-2-69302 ⁽¹⁾
			7.5...40	TA-2-54525 ⁽¹⁾
			50...60	TA-2-81202 ⁽¹⁾
			75...100	TA-2-81203 ⁽¹⁾
			125...150	TA-2-69303 ⁽¹⁾
Control Transformer Fuse Holder		208V AC	3.0...30	PL-112706 ⁽¹⁾
			40...50	PL-112707 ⁽¹⁾
		460V AC	3.0...5.0	PL-112701 ⁽¹⁾
			7.5...60	PL-112706 ⁽¹⁾
			75...100	PL-112707 ⁽¹⁾
			125...150	PL-112702 ⁽¹⁾

Table 8 - Enclosure Parts for NEMA/UL Type 4 (Continued)

Description	Designation	Voltage	Hp	Part Number
Control Transformer Primary Fuses	FU4...FU5	208V AC	3.0...20	ATQR-12
			25...30	ATQR-15
			40...50	ATQR-20
		460V AC	3.0...5.0	ATQR-1
			7.5...40	ATQR-5
			50...60	ATQR-7.5
			75...100	FRS-R-12
			100...150	ATQR-1.5
Air Conditioner		208V AC	3.0...10	IQ1800VS-126 ⁽²⁾
			15...20	IQ3000VS-126 ⁽²⁾
			25...30	IQ5000V16-126 ⁽²⁾
			40...50	IQ8000V16-126 ⁽²⁾
		460V AC	3.0...5.0	No Air Conditioner
			7.5...20	IQ1800VS-126 ⁽²⁾
			25...40	IQ3000VS-126 ⁽²⁾
			50...60	IQ5000V16-126 ⁽²⁾
			75...100	IQ8000V16-126 ⁽²⁾
			125...150	DTS 3361 ⁽³⁾
Control Circuit Air Conditioner Fuse Holder		208V AC	3.0...50	BM6031PQ
		460V AC	3.0...5.0	No Air Conditioner
			7.5...100	BM6031PQ
			125...150	BC6033P
Control Circuit Air Conditioner Fuse	FU8	208V AC	3.0...20	FNM-10
			25...30	FNM-12
			40...50	FNM-20
		460V AC	3.0...5.0	No Fuse
			7.5...40	FNM-10
			50...60	FNM-12
			75...100	FNM-20
			125...150	ATQR-10
Air Conditioner Filter Media		208V AC	3.0	No Filter
			5.0...50	Media is washable
		460V AC	3.0...5.0	No Filter
			7.5...20	Media is washable
			25	POF1019-GAL ⁽²⁾
			30...100	Media is washable
			125...150	18881500002 ⁽³⁾
Control Circuit Heater Fuse Holder		208V AC	3.0...50	BM6031PQ
		460V AC	3.0...150	BM6031PQ
Control Circuit Heater Fuse	FU7	208V AC	3.0...20	FNM-2
			25...50	FNM-3.2
		460V AC	3.0...40	FNM-2
			50...150	FNM-3.2
Heater		208V AC	3.0...30	D-AH1001A ⁽⁴⁾
			40...50	D-AH2001A ⁽⁴⁾
		460V AC	3.0...60	D-AH1001A ⁽⁴⁾
			75...150	D-AH2001A ⁽⁴⁾

- (1) Manufactured by Acme Electric.
- (2) Manufactured by Ice Qube Inc.
- (3) Manufactured by Pfannenberg Inc.
- (4) Manufactured by Hoffman Enclosures Inc.

Notes:

History of Changes

This appendix summarizes the revisions to this manual. Reference this appendix if you need information to determine what changes have been made across multiple revisions. This may be especially useful if you are deciding to upgrade your hardware or software based on information added with previous revisions of this manual.

23C-IN001B-EN-P, June 2013

Change

Removed all content related to the discontinued 3 Contactor Basic Bypass with Disconnect Package (Style C)

Notes:

Rockwell Automation Support

Rockwell Automation provides technical information on the Web to assist you in using its products.

At <http://www.rockwellautomation.com/support> you can find technical and application notes, sample code, and links to software service packs. You can also visit our Support Center at <https://rockwellautomation.custhelp.com/> for software updates, support chats and forums, technical information, FAQs, and to sign up for product notification updates.

In addition, we offer multiple support programs for installation, configuration, and troubleshooting. For more information, contact your local distributor or Rockwell Automation representative, or visit <http://www.rockwellautomation.com/services/online-phone>.

Installation Assistance

If you experience a problem within the first 24 hours of installation, review the information that is contained in this manual. You can contact Customer Support for initial help in getting your product up and running.

United States or Canada	1.440.646.3434
Outside United States or Canada	Use the Worldwide Locator at http://www.rockwellautomation.com/rockwellautomation/support/overview.page , or contact your local Rockwell Automation representative.

New Product Satisfaction Return

Rockwell Automation tests all of its products to help ensure that they are fully operational when shipped from the manufacturing facility. However, if your product is not functioning and needs to be returned, follow these procedures.

United States	Contact your distributor. You must provide a Customer Support case number (call the phone number above to obtain one) to your distributor to complete the return process.
Outside United States	Please contact your local Rockwell Automation representative for the return procedure.

Documentation Feedback

Your comments will help us serve your documentation needs better. If you have any suggestions on how to improve this document, complete this form, publication [RA-DU002](#), available at <http://www.rockwellautomation.com/literature/>.

Rockwell Automation maintains current product environmental information on its website at <http://www.rockwellautomation.com/rockwellautomation/about-us/sustainability-ethics/product-environmental-compliance.page>.
