# Kinetix Motor Single Cables

Kinetix 2090 single motor cables combine motor power, feedback, and brake conductors all in a single shielded cable. Standard (non-flex) motor cables with rugged SpeedTec DIN connectors are designed for use with Kinetix 5500 and Kinetix 5700 drive systems, and intended for static applications. Continuous-flex rated cables, intended for rolling and reverse bending applications, are also available.

---

**IMPORTANT** Because of the unique characteristics of single-cable technology, which is designed for and tested with the Kinetix 5500 and Kinetix 5700 drive families with Kinetix VP motors and actuators, building your own cables, using field modified Rockwell Automation® factory-delivered cable, or using third-party cable is not an option.

---

**IMPORTANT** Flying-lead motor power, feedback, and (optional) brake conductors terminate at the drive by using the 2198-KITCON-DSL feedback connector kit. Refer to the Kinetix 5700, 5500, 5300, 5100 Servo Drives Specifications Technical Data, publication [KNX-TD003](#), for more information on the 2198-KITCON-DSL connector kit that is used with the Kinetix 5500 and Kinetix 5700 servo drives.

---

**IMPORTANT** Continuous-flex single motor cables have a minimum bend radius of 10 times the cable diameter for 2090-CSxM1xx-xxAFxx (TPE) cables and 7 times the cable diameter for 2090-CSBM1xx-xxLFxx (Halogen-free PUR) cables.

---

These Kinetix 2090 motor cables with SpeedTec DIN connectors, designed by Rockwell Automation for optimal performance with Kinetix 5500 and Kinetix 5700 drive families with Kinetix VP motors and actuators, offer best-in-class features and standards compliance. The single-cable design includes power, feedback, and brake conductors. The continuous-flex cable option, cable lengths in 1 m (3.3 ft) increments, and SpeedTec connectors provide machine builders with complete control of the cable requirements in their machines.

## Single Motor Cable Features

Single motor cables are available in three cable materials:

- TPE for standard (non-flex) and continuous-flex cable
- PVC for standard (non-flex) and Halogen-free PUR for continuous-flex cable

## Common Single Motor-cable Features

- NFPA-79 compliant
- Low capacitance design to maximize system power density
- SpeedTec connection system
- Encoder communication data pair with state of the art noise rejection
- DESINA compliant jacket (orange) coloring for easy identification and separation of cables in a machine
- Cables are included in the Rockwell Automation® servo system Declaration of Conformity (DoC)

## 2090-CSxM1xx-xxAA/AFxx (TPE) Cable Features

- UL Listings: 10, 8, and 6 AWG bulk cable - Flexible VFD servo cable, 18 and 14 AWG bulk cable - PLTC-ER
  - UL AWM, 1000V, 105 °C construction
  - cUR AWM I/II A/B, 600V, 105 °C construction for 6 and 8 AWG cables
- CSA AWM I/II A/B, 1000V, 105 °C construction for 10, 14, and 18 AWG cables
- Rated flex-cycles in linear flexing applications
  - 10, 14, and 18 AWG continuous-flex cables and continuous-flex extension cables are suitable for 20 million flex-cycles at 10 times cable diameter. 10 million flex-cycles in bending (tic-toc) applications (see illustration below).
  - 6 and 8 AWG continuous-flex cables and continuous-flex extension cables are suitable for 6.5 million flex-cycles at 10 times cable diameter
- TPE jacket with superior mechanical and chemical properties
- Cable features overall tinned copper braid with aluminum/polyester tape, delivering 100% coverage for excellent EMC/EMI performance and permits power and signal conductors in a single cable
- FT4 rated flame test

## 2090-CSxM1xx-xxVaxx (PVC) and 2090-CSBM1xx-xxLFxx (Halogen-free PUR) Cable Features

- UL Recognized: 18, 14, 10, 8, and 6 AWG bulk cable
  - UL AWM, 1000V, 90 °C construction
  - cUR/CSA AWM I/II A/B, 1000V, 90 °C construction
- Rated flex-cycles in linear flexing applications
  - 6, 8, 10, 14, and 18 AWG continuous-flex cables and continuous-flex extension cables are suitable for 10 million flex-cycles at 7 times cable diameter or 15 million flex-cycles at 10 times cable diameter
  - 5 million flex-cycles in bending (tic-toc) applications (see illustration below)
- PVC and PUR jacket with durable mechanical and chemical properties
- Cable features overall tinned copper braid, delivering 85% coverage and tested for excellent EMC/EMI performance and permits power and signal conductors in a single cable
- FT1 rated flame test
- PUR (LF) is Halogen Free materials to IEC 60754, UL 2885

## Kinetix Single Motor Cables Overview

2090-CSxM1DF and 2090-CSxM1DG single motor cables with flying leads provide power, feedback, and brake conductors in a single shielded cable. Refer to Technical Specifications - Kinetix 2090 Single Motor Cables on [page 12](#) for cable descriptions, weights, and standard cable lengths.

### Single Motor Cable Descriptions (flying leads)

2090-CSxM1DE single motor cables also provide power, feedback, and brake conductors in a single shielded cable. However, 2090-CSxM1DE cables include the 2198-KITCON-DSL feedback connector kit that is pre-assembled with the feedback conductors. See Technical Specifications - Kinetix 2090 Single Motor Cables on [page 12](#) for cable descriptions, weights, and standard cable lengths.

Optimize the placement of your continuous-flex application with extension cables. Use standard (non-flex) extension cables to cover distances that are outside of the continuous-flex application. For example, attach a standard (non-flex) extension cable to the motor and use a continuous-flex flying lead cable for applications that require flexing closer to the drive. The stationary portion of cable can stay routed permanently throughout the application while the continuous-flex cable can be placed in the location that may need maintenance, changeovers, replacement, or general services.

The IP rating for extension cables is consistent with the motor/actuator and cable combination they are extending. Extension cables are available with 18, 14, 10, 8, and 6 AWG power conductors and lengths up to 30 m (98.4 ft).

Single Extension Cable Description

(1) SpeedTec DIN connector (motor end) and male connector for extending SpeedTec DIN cable. Refer to Single Continuous-flex Extension Cable with Bulkhead Adapter Example on [page 7](#).

Typical Single Motor Cable Applications

The cable technology used in single cables is the same regardless of the catalog number. What is different about each cable is the lead preparation and feedback conductor terminations.

- 2090-CSxM1DF cable conductors have flying-leads and lead preparation that is designed specifically for Kinetix 5500 servo drives. No on-site lead preparation is required.
- 2090-CSxM1DE cables include the 2198-KITCON-DSL connector kit. The kit is pre-assembled with the feedback conductors and lead preparation for the flying-lead power conductors is designed specifically for Kinetix 5700 servo drives. No on-site lead preparation is required.
- 2090-CSxM1DG cable conductors have flying-leads and lead preparation that is designed for either Kinetix 5500 or Kinetix 5700 servo drives. No on-site lead preparation is required, however, 2090-CSxM1DG cable leads are longer than 2090-CSxM1DF cable leads to accommodate either drive family.

**IMPORTANT** To avoid problems securing the cable in the shield clamp and routing the flying leads to the motor power, feedback, and brake connector plugs, make sure that you are using the cable that is best suited for your application.

- Use 2090-CSxM1DF cables with Kinetix 5500 servo drives (2198-KITCON-DSL connector kit is included with the drive)
- Use 2090-CSxM1DE cables with Kinetix 5700 servo drives (2198-KITCON-DSL connector kit is pre-wired to the feedback conductors)
- Use 2090-CSxM1DG cables with Kinetix 5500 or Kinetix 5700 servo drives (when used with Kinetix 5700 drives, the 2198-KITCON-DSL connector kit is ordered separately)

## Single Continuous-flex Extension Cable with Bulkhead Adapter Example

In this example, the continuous-flex application is near the motor, however, if the continuous-flex application is closer to the drive, a standard (non-flex) extension cable can be attached to the motor.

# Kinetix Single Motor Cable Selection

These tables provide single motor cable catalog numbers for use with Kinetix VP motors and actuators. Single motor cables include conductors for motor power, feedback, and motor brakes (if applicable). The IP rating is dependent on the use of Kinetix 2090 cables as listed in the table.

**IMPORTANT** Maximum motor cable length depends on the feedback type and overall system design. The drive-system power supply, AC input-power type, and AC input voltage are among the configuration variables. For more information on maximum cable lengths see your servo drive user manual or the Kinetix 5700, 5500, 5300, 5100 Servo Drives Technical Data, publication [KNX-TD003](#).

**IMPORTANT** Maximum motor cable length depends on the feedback type and overall system design. The drive-system power supply, AC input-power type, and AC input voltage are among the configuration variables. For more information on maximum cable lengths see your servo drive user manual or the Kinetix 5700, 5500, 5300, 5100 Servo Drives Technical Data, publication [KNX-TD003](#).

# Dimensions - Kinetix 2090 Single Motor Cables

When installing single cable runs between the motor and drive, be careful not to stress the cable by making bends too sharp. Refer to the table below for bend radius definitions and the dimension diagrams that follow when routing cables during system installation.

## Single Cable Bend Radius Definitions

Type of Bend Radius	Type of Cable	Description
Static bend radius	Standard (non-flex)	The static (installation) bend radius and dimension B is: <ul style="list-style-type: none"> <li>• 7 times the cable diameter for 2090-CSBM1xx-xxAA/AFxx cables</li> <li>• 5 times the cable diameter for 2090-CSBM1xx-xxVA/LFxx cables</li> <li>• Do not begin a static bend inside dimension B.</li> <li>• Use this measurement when routing the cable in a non-flex application between motor and drive (the bend area).</li> <li>• The bend area is where standard (non-flex) or continuous-flex cables can be bent to their specified bend radius.</li> </ul>
	Continuous flex	
Continuous bend radius	Continuous flex	The continuous bend radius for Kinetix 2090 single motor cables is: <ul style="list-style-type: none"> <li>• 10 times the cable diameter for 2090-CSBM1xx-xxAFxx cables</li> <li>• 7 times the cable diameter for 2090-CSBM1xx-xxLFxx cables</li> <li>• Secure the continuous-flexing area, the recommended cable diameters (dimension B) from each end of the cable, with a rigid mount that helps prevent the cable from flexing where it connects to the motor or shield clamp. Refer to the cable carrier manufacturer's recommendations for procedure and dimensions related to flexing applications.</li> <li>• Use this measurement when routing the cable in a continuous-flex application between motor and drive (the continuous-flexing area).</li> <li>• The continuous flexing area is where continuous-flex cables can be flexed repeatedly.</li> <li>• Install the cable along the neutral axis to make sure that the cable is not in contact with the inner radius of the cable carrier while flexing.</li> </ul>

# Kinetix Motor Power and Feedback Cables

A wide variety of power and feedback cables with rugged DIN connectors are available for connecting your motion control system. Standard (non-flex) motor power and feedback cables are available for all Allen-Bradley servo motors and actuators. Continuous-flex rated cables, intended for moving applications, are also available. Continuous-flex extension and standard (non-flex) transition cables are also available for your applications that require them.

---

**IMPORTANT** All flying-lead feedback cables require breakout components or connector kits for drive-end terminations. Refer to Breakout Components and Connector Kits in Kinetix 3, 300, 350, 2000, 6000, 6200, 6500, 7000 Servo Drives Specifications, publication [KNX-TD005](#) for catalog numbers and descriptions.

---

**IMPORTANT** Standard (non-flex) cables have a regular maintenance and installation bend radius of 7 times the cable diameter. For flexing applications, continuous-flex cables have an operational bend radius of 12 times the cable diameter.

---

## Catalog Numbers - Kinetix Power and Feedback Cables

Catalog numbers consist of various characters, each of which identifies a specific option for that component. Use the catalog numbering charts below to understand the configuration of your component. For questions regarding product availability, contact your Allen-Bradley distributor.

## Kinetix Motor Power and Feedback Cables with SpeedTec DIN Connectors Overview

Kinetix power and feedback cables with SpeedTec DIN connectors let OEMs and end-users standardize their machines on a common motor cable family. These cables, designed by Rockwell Automation for optimal performance with Allen-Bradley servo drives, servo motors, and linear actuators, offer best-in-class features and standards compliance. Innovative features, configuration options, and accessories provide machine builders with complete control of the cable requirements in their machines.

### SpeedTec DIN Cable Features

- NFPA 79 Compliant
- UL Listed bulk cable with 600V insulation rating for use in cable trays and exposed run applications.
  - Type TC-ER: Power-only and power-with-brake cables
  - Type PLTC-ER: Feedback cable optimized for high-resolution feedback motors
- CSA AWM, I/II A/B, 600V, 90 °C construction
- SpeedTec connection system yields quick connections with positive metallic keying
- DESINA compliant jacket coloring (orange for power, green for feedback) for easy identification and separation of cables in a machine
- Cables are included in the Rockwell Automation servo system Declaration of Conformity (DoC)
- Continuous flex cables are suitable for 20 million flex-cycles
  - Continuous-flex cables are also available in extension cable configurations
- Comprehensive accessories optimize the use of cables in machines

## SpeedTec DIN Continuous-flex Extension Cables

Motor power and feedback extension cables provide continuous-flex cable technology between your standard (non-flex) cable and the continuous-flex application. The IP rating for continuous-flex extension cables is consistent with the motor/actuator and cable combination they are extending. Extension cables are available in lengths up to 30 m (98.4 ft). Extension power cables are available in 16, 14, 10, and 8 AWG.

# Kinetix Motor Power and Feedback Transition Cables

Motor power/brake and feedback transition cables support installations where Kinetix MPL motors with bayonet connectors were recently replaced by the same motor with circular DIN connectors. These 0.5 m (19.7 in.) cables provide a seamless transition between your new motor and existing power, brake, and feedback cables.

Brake contacts for motors with bayonet connectors are in a separate connector. Power/brake cables with circular DIN connectors (either threaded or SpeedTec) include brake contacts in the power/brake connector.

## Bayonet and Circular DIN Motor Connectors

## Transition Cable Application (power-only cable)

## Transition Cable Application (power/brake cable)

Refer to the transition cable selection tables on [page 31](#) for cable catalog numbers for the specific Kinetix MPL or Kinetix MPM motor you are transitioning to.

# Circular DIN Connector Compatibility Overview

Motors equipped with either threaded or SpeedTec circular DIN connectors are listed below. Circular DIN motor connectors rotate up to 180° and combine power and brake wires in the same connector.

(1) The Kinetix LDC and Kinetix LDL linear motors, LDAT-Sxxxxxx-xBx linear thrusters, Kinetix MPAS and MPMA linear stages, and Kinetix RDB motors have SpeedTec-ready DIN (M7) motor connectors, but require the additional conductors included with 2090-CFBM7DF-CDAFxx (continuous-flex) and 2090-XXNFMF-Sxx standard (non-flex) cables.  
 (2) For information to help size cables for these large motors, see Kinetix MMA Asynchronous Motor Frequently Asked Questions for Good Installation Processes, [Knowledgebase](#) article for additional information.

**IMPORTANT** Motors equipped with SpeedTec-ready DIN (M7) connectors are fully compatible with threaded DIN (M4) cable plugs.

- SpeedTec-ready DIN motor connectors are also compatible with SpeedTec DIN (M7/E7) extension cable plugs.
- Motors equipped with threaded DIN (M4) connectors are compatible with only threaded DIN (M4) cable plugs.

## Typical Circular DIN Cable Applications

## Kinetix Motor Power and Feedback Cable Selection

These tables provide motor power and feedback cable catalog numbers for use with Allen-Bradley servo motors. Most motor brake wires are in the power cable, so a separate brake cable is not required (except where noted). The IP rating is dependent on the use of Allen-Bradley Kinetix 2090 cables as listed in these tables.

**IMPORTANT** Maximum motor cable length depends on the feedback type and overall system design. The drive-system power supply, AC input-power type, and AC input voltage are among the configuration variables. For more information on maximum cable lengths see your servo drive user manual or the Kinetix 5700, 5500, 5300, 5100 Servo Drives Technical Data, publication [KNX-TD003](#).

Kinetix 5700 single-axis inverters (catalog numbers 2198-S086-ERSx, 2198-S130-ERSx, and 2198-S160-ERSx) are compatible with 2090-CPxM7DF cables that have 10, 8, 6, 4, and 2 AWG power conductors. 2198-S263-ERSx and 2198-S312-ERSx single-axis inverters are also compatible with 2090-CPxM7DF cables, but only 4 and 2 AWG power conductors.

(1) IP65 with shaft seal (standard) and the use of Rockwell Automation factory-delivered Kinetix 2090 cable connectors.

For cable configuration illustrations and feature descriptions, by catalog number, refer to Kinetix Motor Power and Feedback Cables beginning on [page 20](#). Cable length xx is in meters. Refer to Technical Specifications - Kinetix Motor Power and Feedback Cables beginning on [page 41](#).

**IMPORTANT** The Kinetix MPL servo motors on this page are equipped with DIN connectors (specified by 7 in the catalog number) and are not compatible with cables designed for motors equipped with bayonet connectors (specified by 2 in the catalog number). The motors with bayonet connectors (for example, MPL-A310P-xx2xAA) are being discontinued and require 2090-XXNFMF-Sxx (bayonet) cables. For help with migration or to select bayonet cables, contact your Rockwell Automation sales representative.

## Technical Specifications - Kinetix Motor Power and Feedback Cables

**IMPORTANT** Maximum motor cable length depends on the feedback type and overall system design. The drive-system power supply, AC input-power type, and AC input voltage are among the configuration variables. For more information on maximum cable lengths see your servo drive user manual or the Kinetix 5700, 5500, 5300, 5100 Servo Drives Technical Data, publication [KNX-TD003](#).

## Dimensions - Kinetix Motor Power and Feedback Cables

When installing cable runs between the motor and drive, be careful not to stress the cable by making bends too sharp. Refer to the table below for bend radius definitions, and the dimension diagrams that follow, when routing cables during system installation.

### Motor Power and Feedback Cable Bend Radius Definitions

Type of Bend Radius	Type of Cable	Description
Static bend radius	Standard (non-flex)	The static (installation) bend radius and dimension B are 7 times the cable diameter: <ul style="list-style-type: none"> <li>Do not begin a static bend inside dimension B.</li> </ul>
	Continuous flex	<ul style="list-style-type: none"> <li>Use this measurement when routing the cable in a non-flex application between motor and drive (the bend area).               <ul style="list-style-type: none"> <li>The bend area is where standard (non-flex) or continuous-flex cables can be bent to their specified bend radius.</li> </ul> </li> </ul>
Continuous bend radius	Continuous flex	The continuous bend radius for Kinetix motor power and feedback cables is 12 times the cable diameter: <ul style="list-style-type: none"> <li>Secure the continuous-flexing area, at least 7 cable diameters (dimension B) from each end of the cable, with a rigid mount that helps prevent the cable from flexing where it connects to the motor or shield clamp.</li> <li>Use this measurement when routing the cable in a continuous-flex application between motor and drive (the continuous-flexing area).               <ul style="list-style-type: none"> <li>The continuous flexing area is where continuous-flex cables can be flexed repeatedly.</li> </ul> </li> </ul>

The tables beginning on [page 53](#) provide a cross-reference for the circular DIN (M4 and M7) connector kits above to the compatible motor series catalog number. Also provided are the bulkhead adapters for securing the cables as they pass through the cabinet and crimping tools required for properly attaching the power wires to sockets and pins. See Kinetix 2090 Circular-DIN Connector Kits, Flange Kits, and Crimp Tools, publication [2090-IN042](#), for more information.

Connector kits and crimping tools are also available for circular plastic (M6) connectors. Refer to [page 54](#) for the compatible motor series and crimp tool catalog numbers.

# ArmorKinetix 2090 Cables

ArmorKinetix® cables provide a simplified and robust connection system to ArmorKinetix modules and Kinetix motors. Cables come with rugged SpeedTec DIN connectors and are continuous flex rated for your application. Hybrid and power cables are UL PVVA recognized. Feedback and Ethernet Extension cables are UL CYJV recognized.

## ArmorKinetix Cable Features

### Hybrid Cable:

- Daisy chain cable connection between DSx modules simplifies the system connection.
- TPE cable material for continuous-flex cable
- UL PVVA Recognized
- 2090-CDHIFS-12AFxxx are available in 0.1 m (0.3 ft) increments between 3...5 m (9.8...16.4 ft) and 0.5 m (1.6 ft) increments between 5...50 m (16.4...164.0 ft)
- 2090-CDHP1S-12AFxxx are available in 0.1 m (0.3 ft) increments between 0.1...5 m (0.3...16.4 ft) and 0.5 m (1.6 ft) increments between 5...30 m (16.4...164.0 ft)
- 2090-CDHP1S-12AFJ is 0.3 m (0.98 ft) in length

### Motor Power/Feedback Cable:

- Single cable motor power/feedback connection between DSD modules and Kinetix VPL motors or motor power connection between DSD modules and Kinetix MPL, Kinetix linear, and Induction motors
- PUR cable material for Halogen-free continuous-flex cable
- UL PVVA Recognized
- 2090-CSBM1P7-14AFxx and 2090-CPWFLP7-14AFxx are available in 1 m (3.2 ft) increments up to 4 m (13.1 ft)

### Feedback Cable:

- Feedback cable between DSD modules and Kinetix MPL motors, Kinetix linear motors, induction motors, and auxiliary feedback device
- PUR cable material for Halogen-Free continuous-flex cable
- UL CYJV Recognized
- 2090-CFBFLS7-CDAFxx and 2090-CFBM7S7-CDAFxx are available in 1 m (3.2 ft) increments up to 4 m (13.1 ft)

### Hybrid Ethernet Extension Cable:

- Connecting between DSx modules and Kinetix 5700 In-cabinet drives or Ethernet Switch devices.
- TPE cable material for continuous-flex cable
- UL CYJV Recognized
- 2090-CDET is 0.5 m (1.6 ft) in length

---

**IMPORTANT** Due to the unique characteristics of Kinetix 2090 single cable technology, designed for and tested with ArmorKinetix DSx modules, building your own cables or using third-party cable is not an option.

## Cable Catalog Numbers

Catalog numbers consist of various characters, each of which identifies a specific option for that component. Use the catalog numbering charts below to understand the configuration of your component. For the cable type: PUR = Polyurethane and TPE = Thermoplastic Elastomer.

### ArmorKinetix PIM to ArmorKinetix DSx Hybrid Cables

This cable connects the ArmorKinetix Power Interface Module (PIM) to either the ArmorKinetix Distributed Servo Motor (DSM) or the Distributed Servo Drive (DSD).

(a) For 3 m to 5 m cable lengths, cables are available in 0.1 m increments. For cable lengths longer than 5 m, cables are available in 0.5 m increments.

### ArmorKinetix DSD to Kinetix VPL/MPL Motor Power Cable

This cable connects the distributed servo drive to Kinetix® VPL/MPL motors.

### ArmorKinetix DSx to DSx Hybrid Cables

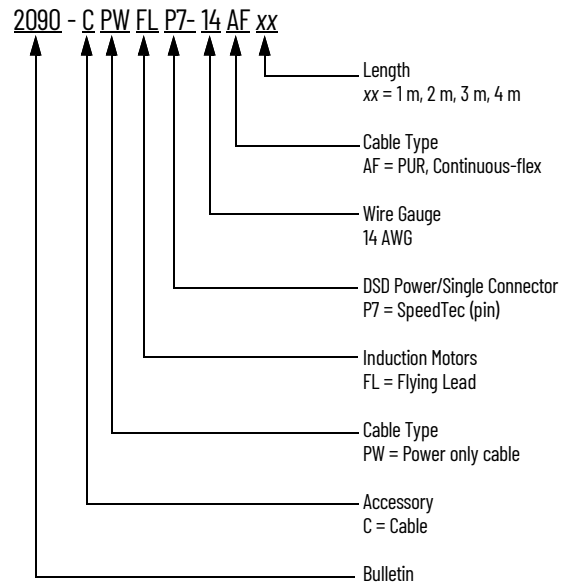

This cable connects distributed servo drives and motors to each other.

(a) For 0.5...5 m cable lengths, cables are available in 0.1 m increments. For cable lengths longer than 5 m, cables are available in 0.5 m increments.

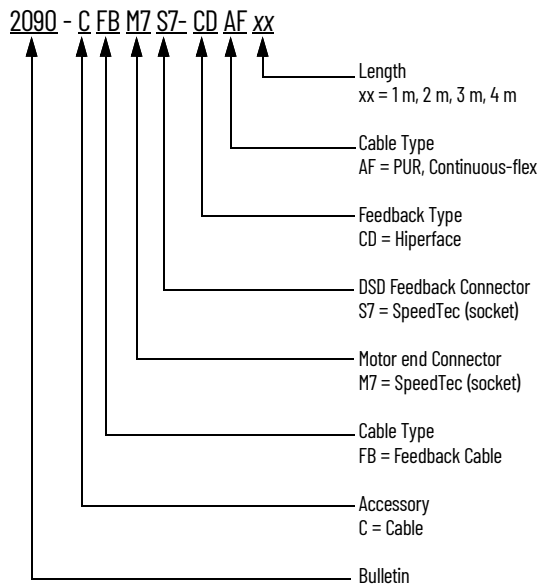

### ArmorKinetix DSD to Induction Motor Power Cable

This cable connects the DSD to induction motors with open loop, Hiperface, incremental TTL, and generic SIN/COS encoders.

### ArmorKinetix DSD to Kinetix Motor Feedback Cable

This cable connects the Kinetix motor feedback to the distributed servo drive.

### ArmorKinetix DSD to Induction Motor Feedback or Auxiliary Feedback Cable

This cable connects an induction motor feedback or auxiliary feedback device to the distributed servo drive.

## Motor Connector/Cable Compatibility

ArmorKinetic DSD and DSM modules are equipped with SpeedTec DIN connectors.

**SpeedTec Connector**

- DSD and DSM modules
- Receives only single cable plugs
- Attach cable plug with one-quarter turn

**SpeedTec DIN Single Cable Plug**

### Connector Terminator Dimensions - 2090-CDHT, 2090-CDFT, 2090-CDPT

Dimensions in millimeters (inches). Dimensions are not intended to be used for manufacturing purposes.

ArmorKinetic DSx Hybrid Connector Output Terminator - 2090-CDHT

ArmorKinetic DSD Feedback Connector Terminator - 2090-CDFT

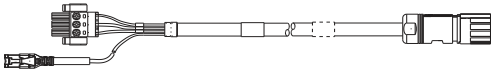

ArmorKinetic DSD Power Connector Terminator - 2090-CDPT

- The terminator kits are designed for IP protection on DSx modules when a connector is not used
- 2090-CDHT and 2090-CDPT are UL PVVA Recognized
- 2090-CDFT is UL CYJV Recognized

## Motor Cable Selection

These cables apply to Allen-Bradley compatible rotary motors including Kinetix VPL, VPF, VPS, and VPH (63...130 mm frames) rotary motors and Kinetix MPL, MPF, MPS, and MPM (100...130 mm frames) rotary motors. They also apply to compatible Kinetix LDAT linear thrusters, Kinetix VPAR and MPAR electric cylinders, and LDC linear motors. For maximum motor-cable lengths with ArmorKinetix modules, see the ArmorKinetix System User Manual, publication [2198-UM006](#).

# Kinetix TL and TLY Motor Power and Feedback Cables

A wide variety of power and feedback cables with rugged connectors are available for connecting your motion control system. Standard (non-flex) motor power and feedback cables are available for all Allen-Bradley servo motors and actuators.

---

**IMPORTANT** All flying-lead feedback cables require breakout components or connector kits for drive-end terminations. Refer to Breakout Components and Connector Kits in Kinetix 3, 300, 350, 2000, 6000, 6200, 6500, 7000 Servo Drives Specifications, publication [KNX-TD005](#) for catalog numbers and descriptions.

---

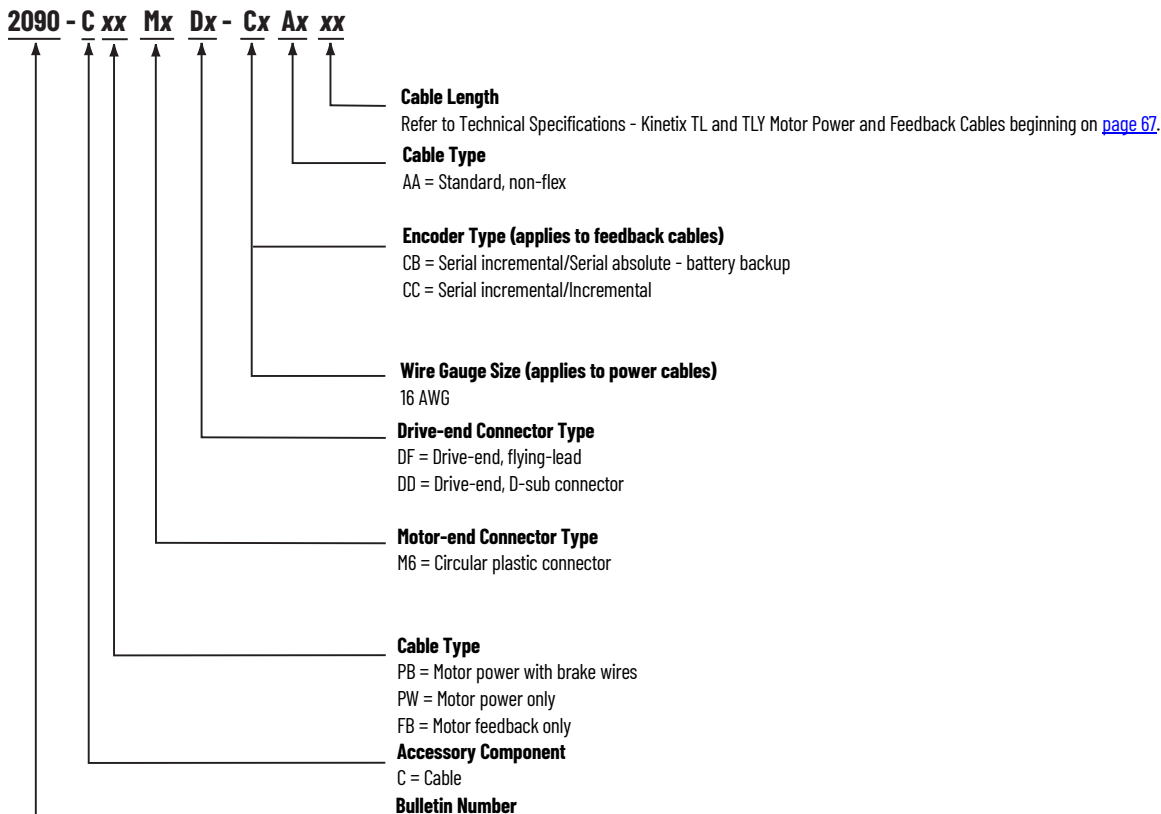

**IMPORTANT** Standard (non-flex) cables have a regular maintenance and installation bend radius of 7 times the cable diameter.

# Technical Specifications - Kinetix TL and TLY Motor Power and Feedback Cables

**IMPORTANT** Maximum motor cable length depends on the feedback type and overall system design. The drive-system power supply, AC input-power type, and AC input voltage are among the configuration variables. For more information on maximum cable lengths see your servo drive user manual or the Kinetix 5700, 5500, 5300, 5100 Servo Drives Specifications Technical Data, publication [KNX-TD003](#).

Dimensions - Kinetix TL and TLY Motor Power and Feedback Cables

When installing cable runs between the motor and drive, be careful not to stress the cable by making bends too sharp. Refer to the table below for bend radius definitions, and the dimension diagrams that follow, when routing cables during system installation.

Motor Power and Feedback Cable Bend Radius Definitions

Type of Bend Radius	Type of Cable	Description
Static bend radius	Standard (non-flex)	The static (installation) bend radius and dimension B are 7 times the cable diameter: <ul style="list-style-type: none"> <li>Do not begin a static bend inside dimension B.</li> <li>Use this measurement when routing the cable in a non-flex application between motor and drive (the bend area).                             <ul style="list-style-type: none"> <li>The bend area is where standard (non-flex) or continuous-flex cables can be bent to their specified bend radius.</li> </ul> </li> </ul>

## Kinetix TLP Motor Power and Feedback Cables

Kinetix TLP power and feedback cables are designed specifically for applications with Kinetix TLP servo motors and Kinetix 5100 or Kinetix 5300 drives. Cables equipped with rectangular connectors mate with the on-motor cables that are included with TLP-A046, TLP-A/B070, TLP-A/B090, and TLP-A100 motors. Cables equipped with military style connectors mate with all other (larger) Kinetix TLP servo motors. Standard (non-flex) motor power and feedback cables are available, as are continuous-flex rated cables that are intended for moving applications. Continuous-flex extension cables are also available for your applications that require them.

---

**IMPORTANT** Feedback cables include a drive-end connector, but 2198-K5xCK-D15M feedback connector kits are available and provide drive-end terminations when building your own cables. Refer to Kinetix TLP Motor-end Cable Connector Kits beginning on [page 83](#) for power and feedback cable connector kit catalog numbers and descriptions. Refer to the Kinetix 5700, 5500, 5300, 5100 Servo Drives Specifications Technical Data, publication [KNX-TD003](#), for more information on the 2198-K5xCK-D15M connector kit that is used with Kinetix 5100 and Kinetix 5300 servo drives.

---

**IMPORTANT** Standard (non-flex) cables have a regular maintenance and installation bend radius of 7 times the cable diameter. For flexing applications, continuous-flex cables have an operational bend radius of 12 times the cable diameter.

---

The Kinetix TLP power and feedback cables are designed to match with Kinetix TLP servo motors and Kinetix 5100 or Kinetix 5300 drives for optimal system performance. Kinetix TLP cables offer up to 50 m (164 ft) in length and a variety of options for your application needs.

### Kinetix TLP Motor Cable Features

- UL Recognized: 18, 16, 12, 8, 6, and 4 AWG power cable
  - UL AWM, 600V, 105 °C construction
  - cUR AWM I/II A, 600V, 105 °C construction
- UL Recognized: Feedback cable
  - UL AWM, 300V, 80 °C construction for up to 20 m (65.6 ft) cable length
  - UL AWM, 30V, 80 °C construction for 30 m (98.4 ft) and 50 m (164 ft) cable length
- UL Recognized: Brake cable
  - UL AWM, 300V, 105 °C construction
- Molded connectors for 16 and 18 AWG, military style connectors for 16...4 AWG
- PVC cable jacket
- Tested for EMC/EMI system performance

## Motor Connector/Cable Compatibility

TLP-A046, TLP-A/B070, TLP-A/B090, and TLP-A100 servo motors are equipped with rectangular connectors.

TLP-A/B115, TLP-A/B145, TLP-A/B200, TLP-A/B235 servo motors are equipped with military style connectors.

## Kinetix TLP Motor Cable Selection

This table provides motor cable catalog numbers for use with Kinetix TLP servo motors. Motor power, feedback, and motor brakes (if applicable) cables are specified. The IP rating is dependent on the use of Kinetix 2090 cables as listed in the table.

**IMPORTANT** Maximum motor cable length depends on the feedback type. For more information on maximum cable lengths, see your servo drive user manual or the Kinetix 5700, 5500, 5300, 5100 Servo Drives Specifications Technical Data, publication [KNX-TD003](#).

(1) The TLP-A046...TLP-A100 frame on-motor cables include 18 AWG conductors that are compatible with 2090-CTPx-MADF-18xxx cable conductors.

(2) For TLP-A090-xxx motors, use 2090-CTPx-MADF-16xxx motor power/brake cable to comply with NFPA 79 requirements.

(3) For TLP-A115-100 motors, use 2090-CTPx-MCDF-12xxx motor power/brake cable to comply with NFPA 79 requirements.

(4) For TLP-A200-350 motors, use 2090-CTPx-MDDF-08xxx motor power/brake cable to comply with NFPA 79 requirements.

(5) For TLP-A235-11K motors, use 2090-CTPx-MEDF-04xxx motor power cable to comply with NFPA 79 requirements.

(6) Only these motors have separate brake connectors and brake cables. All other motors have brake wires included with the motor power/brake connector.

(7) For TLP-A235-15K motors, you must build your own motor power cable to comply with NFPA 79 requirements.

## Dimensions - Kinetix TLP Motor Cables

When installing cable runs between the motor and drive, be careful not to stress the cable by making bends too sharp. Refer to the table below for bend radius definitions and the dimension diagrams that follow when routing cables during system installation.

### Motor Power/brake, Feedback, and Brake Cable Bend Radius Definitions

Type of Bend Radius	Type of Cable	Description
Static bend radius	Standard (non-flex)	The static (installation) bend radius and dimension B are 7 times the cable diameter:
	Continuous flex	<ul style="list-style-type: none"> <li>Do not begin a static bend inside dimension B.</li> <li>Use this measurement when routing the cable in a non-flex application between motor and drive (the bend area).                             <ul style="list-style-type: none"> <li>The bend area is where standard (non-flex) or continuous-flex cables can be bent to their specified bend radius.</li> </ul> </li> </ul>
Continuous bend radius	Continuous flex	The continuous bend radius for 2090-CTxx-Mxxx motor power and feedback cables is 12 times the cable diameter: <ul style="list-style-type: none"> <li>Secure the continuous-flexing area, at least 7 cable diameters (dimension B) from each end of the cable, with a rigid mount that helps prevent the cable from flexing where it connects to the motor or shield clamp.</li> <li>Use this measurement when routing the cable in a continuous-flex application between motor and drive (the continuous-flexing area).                             <ul style="list-style-type: none"> <li>The continuous flexing area is where continuous-flex cables can be flexed repeatedly.</li> </ul> </li> </ul>

## Kinetix TLP Motor-end Cable Connector Kits

Motor-end connector kits are available for building your own cables. These kits are intended for Kinetix TLP cable connectors.

### Kinetix TLP Motor-end Cable Connector Kits

Cable Type	Motor Cat. No.	Connector Kit Cat. No.	Description	
Rectangular	TLP-A046-xxx, TLP-A/B070-xxx, TLP-A/B090-xxx, TLP-A100-xxx	6-pin motor power	2090-KTPC-MA-AA	Straight power connector on motor end.
			2090-KTPC-MA-AE	Straight power connector with extension connector.
		9-pin motor feedback	2090-KTFB-MA-AA	Straight feedback connector.
			2090-KTFB-MA-AE	Straight feedback connector with extension connector.
Military style	TLP-A/B115-xxx, TLP-A/B235-xxx	2090-KTFB-MF-AA	Straight feedback connector.	
		2090-KTFB-MF-AE	Straight feedback connector with extension connector.	
	TLP-A/B115-xxx, TLP-A/B145-xxx	2090-KTPC-MC-AA	Straight power connector.	
		2090-KTPC-MC-AE	Straight power connector with extension connector.	
	TLP-A/B200-200, TLP-A/B200-300, TLP-A/B200-350, TLP-A/B200-450	2090-KTPC-MD-AA	Straight power connector.	
		2090-KTPC-MD-AE	Straight power connector with extension connector.	
	TLP-A/B200-550, TLP-A/B200-750, TLP-A/B235-xxx	2090-KTPC-ME-AA	Straight power connector.	
		2090-KTPC-ME-AE	Straight power connector with extension connector.	
		2090-KTBK-MB-AA	Straight brake connector.	
		2090-KTBK-MB-AE	Straight brake connector with extension connector.

## Additional Resources

These documents contain additional information concerning related products from Rockwell Automation. You can view or download publications at [rok.auto/literature](http://rok.auto/literature).

Resource	Description	
Kinetix Rotary Motion Specifications, publication <a href="#">KNX-TD001</a>	Provides product specifications for Kinetix VPL, VPC, VPF, VPH, VPS, Kinetix MPL, MPM, MPF, MPS; Kinetix TL and TLY, Kinetix RDB, Kinetix MMA, and Kinetix HPK rotary motors.	
Kinetix Linear Motion Specifications, publication <a href="#">KNX-TD002</a>	Provides product specifications for Kinetix MPAS and MPMA linear stages, Kinetix VPAR, MPAR, and MPAI electric cylinders, and Kinetix LDC and Kinetix LDL linear motors.	
Kinetix 5700, 5500, 5300, 5100 Servo Drives Specifications, publication <a href="#">KNX-TD003</a>	Provides product specifications for Kinetix Integrated Motion over the EtherNet/IP network and EtherNet/IP networking servo drive families.	
Kinetix 3, 300, 350, 2000, 6000, 6200, 6500, 7000 Servo Drives Specifications, publication <a href="#">KNX-TD005</a>	Provides product specifications for Kinetix Integrated Motion over the EtherNet/IP network (Kinetix 6500 and Kinetix 350), Integrated Motion over Sercos interface (Kinetix 6200, Kinetix 6000, Kinetix 2000, and Kinetix 7000), and component (Kinetix 3) servo drive families.	
Kinetix Servo Drive Performance Specifications per Ecodesign Regulation (EU) 2019/1781 technical data, publication <a href="#">KNX-TD006</a>	Provides energy efficiency performance data for Rockwell Automation Kinetix Servo drives. This data supports IE2 compliance of Kinetix Servo drives per EU 2019/1781.	
Kinetix Motion Control Selection Guide, publication <a href="#">KNX-SG001</a>	Provides an overview of Kinetix servo drives, motors, actuators, and motion accessories designed to help make initial decisions for the motion control products best suited for your system requirements.	
Kinetix 5700 Drive Systems Design Guide, publication <a href="#">KNX-RM010</a>	Provides system design guide to determine and select the required (drive specific) drive module, power accessory, connector kit, motor cable, and interface cable catalog numbers for your drive and motor/ actuator motion control system. Included are system performance specifications and torque/speed curves (rotary motion) and force/velocity curves (linear motion) for your motion application.
